

## R E S U L T S

## RESULTS

The results obtained in the present study are summarized in the following tables:

Table 1 shows the age incidence and sex distribution among the 43 patients with meningitis who were included in this study.

Table 2 shows the etiological diagnosis of the different cases and their incidence in relation to the different age groups.

Table 3a, b summarizes the main presenting symptoms in the different age groups and in the different etiological types of meningitis respectively.

Table 4 represents the fate of the cases.

Table 5 represents the incidence of residual manifestations in those cases who recovered but with sequelae.

Table 6a, b shows the incidence of sequelae and mortality in the different age groups and in the different etiological types of meningitis respectively.

Table 7 shows the clinical data and the fate of the studied cases.

Table 8 shows the different laboratory results and other investigations performed to the patient during his stay in the hospital.
