SUMMARY	<i>i</i>

CHAPTER 1

INTRODUCTION	1
☐ 1.1 Magnetic fluids	1
☐ 1.1.1 Introduction	1
☐ 1.1.2 Applications of magnetic fluids	1
☐ 1.1.3 Phase behavior of magnetic fluids	4
☐ 1.2 Basic equations of magnetic fluids	5
☐ 1.2.1 Conservation law of mass	5
☐ 1.2.2 Equations of motion for a magnetic fluid	6
☐ 1.2.3 Boundary conditions	8
☐ 1.3 Concepts of hydrodynamics stability	9
☐ 1.4 The method of multiple scales	15
☐ 1.5 The Kelvin-Helmholtz instability	18
☐ 1.5.1 Physical description of the instability	18
☐ 1.5.2 The Kelvin-Helmholtz model	19
☐ 1.6 On the stability of Mathieu's equation	26

CHAPTER 2

The effect of an oscillatory oblique magnetic field on two-dimensional membranes in streaming magnetic fluids 29

□ 2.1 Introduction.....	29
□ 2.2 Formulation of the problem	37
□ 2.3 Stability behaviour due to a uniform oblique magnetic field	38
□ 2.4 Damped Mathieu equation	41
□ 2.4.1 Stability behaviour due to an oscillatory magnetic field	41
□ 2.4.2 The Rayleigh-Taylor instability.....	43
□ 2.5 Conclusion.....	45

CHAPTER 3

Stability analysis of a frozen crust between two viscoelastic-streaming magnetic fluids.....50

□ 3.1 Introduction	50
□ 3.2 System and equations of the problem.....	51
□ 3.3 Derivation of the characteristic equation.....	57
□ 3.4 The Rayleigh-Taylor instability.....	58
□ 3.5 The Kelvin-Helmholtz instability.....	61
□ 3.6 Conclusion.....	64
