I. INTRODUCTION	1
II. LITERATURE REVIEW	4
A. <u>Culex pipiens</u> as a vector of filariasis	4
B. Susceptibility to infection	10
C. Genetic basis of susceptibility	18
D. Effect of inbreeding on the colonized materials (populations)	26 26
E. Procedures for selecting susceptible and refractory strains	32
F. Biochemical differentiation between susceptible and refractory strains for infection	35
III. MATERIAL AND METHODS	36
(I) Field studies	36
(A) The study area	36
(B) Mosquito sampling	37
1- Sampling equipments	37
2- Sampling procedures	37
3- Transportation of the collected samples	38 38
(C) Experimental infection of <u>Culex pipiens</u> with filarial parasite (<u>Wuchereria</u> <u>bancrofti</u>)	38 38
1- Detection of microfilariae	38
2- Mosquito infection	39
(II) Laboratory studies	40
(A) Laboratory identification and examina- tion of the collected specimens	40
(B) Colonization of <u>Culex pipiens</u>	40
1. Rearing technique	41
1. 1. The larval stage	41
1. 2. The pupal stage	41
1. 3. The adult stage	42

	Page
(C) Experimental infection trials	42
(D) Selection of susceptible and refractory strains	42
(E) Experimental demonstration of human filaria transmission by <u>Cx. pipiens</u> using capillary feeding technique	48
(F) Mode of inheritance of susceptibility and refractoriness of <u>Cx. pipiens</u> to <u>W. bancrofti</u>	50
(G) Evaluation of the influence of different media on the ejection of L ₃ larvae	51
(H) Biochemical differentiation between susceptible and refractory groups of <u>Cx. pipiens</u> to <u>W. bancrofti</u> infection	53
1. Preparation of mosquito samples	53
2. Electrophoretic techniques	53
2. 1. Starch gel electrophoresis	53
2.1.1. Electrophoresis apparatus	53
2.1.2. Buffer system	54
2.1.3. Gel preparation	54
2.1.4. Sample preparation	55
2.1.5. The electrophoretic run	56
2.1.6. Gel slicing	57
2.1.7. Visualization of enzymes	58
Staining methods	59
2.1.8. Analysis of zymograms	62
2. 2. Sodium Dodecyl Sulfate polyacrylamide Gel Electrophoresis (SDS-PAGE)	62
2.2.1. REAGENTS	62
2.2.1.1. Sample Buffer	62
2.2.1.2. Gel Buffer	63
2.2.1.3. Acrylamide gel	63
2.2.1.4. Ammonium persulfate solution	63

	Page
2.2.1.5. N,N,N',N',tetramethyl- ethylene diamine (TMEDA)	64
2.2.1.6. Fixative solution	64
2.2.1.7. Staining Reagent	64
2.2.1.8. Destaining Reagent	64
2.2.1.9. The Electrophoretic gel tubes	64
2.2.1.10. Preparation of poly- acrylamide gel	65
2.2.1.11. Preparation of elec- trophoretic samples ...	65
2.2.2. THE APPARATUS	66
2.2.2.1. Electrophoretic Run ...	66
2.2.2.2. Fixation	67
2.2.2.3. Staining and dest- aining	67
(III) Statistical analysis	69
IV. RESULTS	70
A. Selection of susceptible and refractory strains	70
1. The first trial	70
1.1. Effect of lethal genes during selection	74
2. The second trial	80
B. Experimental human filaria transmission by <u>Culex pipiens</u> using capillary feeding technique.	83
1. the first trial	84
2. The second trial	96
C. Mode of inheritance of susceptibility and refractoriness of <u>Cx. pipiens</u> to <u>Wuchereria</u> <u>bancrofti</u>	109
D. Evaluation of the influence of different media on the ejection of L ₃ larvae	115

	Page
E. Biochemical differentiation between susceptible and refractory groups of <u>Cx. pipiens</u> to <u>W. bancrofti</u> infection	120
1. Characterization of enzymes	120
1.1. α -glycerophosphate dehydrogenase, α -GPD	120
1.2. Esterase , EST	121
1.3. Malate dehydrogenase, MDH	121
1.4. Aldehyde oxidase, Aldox	121
1.5. Malic Enzyme, Me	121
2. Characterization of protein subunits	122
2.1. (F ₁) Subunits	123
2.2. (F ₂) Subunits	124
2.3. (F ₃) Subunits	125
2.4. (F ₄) Subunits	126
2.5. (F ₇) Subunits	127
V. DISCUSSION OF RESULTS AND CONCLUSIONS	130
VI. SUMMARY	150
VII. LITERATURE CITED	155
VIII. ARABIC SUMMARY	170
