

CONTENTS**Page****CHAPTER I****I. INTRODUCTION**

I.1. Introductory Remark	1
I.1.1. Portland cement	1
I.2. Organic Concrete Admixture	5
I.2.1. Organic retarders	5
I.2.2. Organic accelerators	7
I.2.3. The air-entraining agents (AEA)	9
I.2.3.a. Chemistry of air-entraining agents	9
I.2.3.b. The effects of AEA on the water – cement system	10
I.2.3.c. The effects of AEA on the properties of plastic concrete	12
c.1. Volume of air – entrained	13
c.2. The stability of the entrained air	13
c.3. Workability	13
c.4. Water reduction	14
I.2.3.d. The effect of AEA on the properties of hardened concrete	14
d.1. Compressive strength	14
d.2. Durability	14
d.2.a. Resistance aggressive	14
d.2.b. Resistance of freeze – thaw conditions	15
I.2.4. Grinding aids	15
I.2.5. Water reduction and superplasticizers	16
I.2.5.a. Chemistry of superplasticizers	16
I.2.5.b. Main types of superplasticizers	20
b.1. Lignin sulphonate	20
b.2. Naphthalene sulfonate formaldehyde, (NSF)	20

b.3. Melamine sulfonate formaldehyde, (MSF)	21
b.4. Phenol sulphonate formaldehyde, (PSF)	23
b.5. Polycarboxylates, (homo - polymer, co - polymer and ter - polymer)	24
I.3. Physical Properties of Fresh Cement Paste	25
I.3.1. Water of consistency and setting time	25
I.3.2. Workability	26
I.4. Literature Survey	28
I.5. ASTM Specifications	45
I.6. Some Applications of Superplasticizers	46
I.6.1. High strength concrete	46
I.6.2. Ready mixed concrete	47
I.6.3. Massive concrete	47
I.6.4. Prestressed concrete	48
I.7. Objective of the Preset Work	48
<u>CHAPTER II</u>	
II. MATERIALS AND EXPERIMENTAL TECHNIQUES	50
II.1. Materials	50
II.1.1. Cement	50
II.1.2. Superplasticizers	50
II.1.2.a. Prepared superplasticizer	50
a.1. Phenol sulphonate formaldehyde condensate (A)	50
a.2. Phenol sulphonate formaldehyde condensate (B)	51
a.3. Water soluble sulfonated phenolic resin (C)	51
a.4. Sodium sulphanilate – phenol formaldehyde condensate (D)	52
a.5. Sodium sulphanilate - phenol formaldehyde condensate (E)	52
II.1.2.b. Commercial superplasticizer	53
II.2. Structure Confirmation of the Prepared Materials	53

II.2.1. Elemental analysis	53
II.2.2. FTIR spectrophotometer	54
II.2.3. Differential scanning calorimetry, (DSC)	54
II.3. Evaluation of the Prepared Polymers as Concrete Admixtures	54
II.3.1. Rheological measurements	54
II.3.2. Mini - slump measurements	54
II.3.3. Mechanical properties	55
II.3.3.a. Preparation of cement pastes	55
a.1. Mixing	55
a.2. Moulding	55
a.3. Curing	55
a.4. Stopping	56
II.3.3.b. Chemically combined water content (W_n)	56
II.3.3.c. Compressive strength	57
<u>CHAPTER III</u>	
III. RESULTS AND DISCUSSION	58
III.1. The Chemical Structure of the Prepared Superplasticizers	58
III.2. Confirmation of the Prepared Superplasticizers	59
III.2.1. FTIR Spectrum	59
III.3. Rheological Measurements	59
III.3.1. Effect of water / cement ratio on the rheological properties of cement pastes	65
III.3.2. Effect of concrete admixtures on the rheological properties of cement pastes	71
III.3.2.a. Effect of Melment, [Mt]	71
III.3.2.b. Effect of prepared superplasticizers	75
b.1. Sample A	75
b.2. Sample B	79

b.3. Sample C	82
b.4. Sample D	86
b.5. Sample E	90
b.6. Effect of sample E on the rheological properties of SRC pastes	94
III.4. Action of Admixture on the Fresh Cement Paste	98
III.5. Effect of the Superplasticizers on the Mini-slump of Cement pastes	99
III.6. Water Reduction Effect of Superplasticizers	103
III.7. Chemically - Combined Water Contents (W_n)	104
III.8. Compressive Strength	108
III.9. Gel/Space Ratio	111
III.10. Differential Scanning Calorimetry, (DSC)	115
<u>CHAPTER IV</u>	
IV. SUMMARY AND CONCLUSIONS	126
