Introduction	1
CHAPTER (1)	
Fundamentals of Lie Group Analysis and its Application in PDE's	
1.1. Groups of transformations	5
1.2. One- Parameter Lie groups of transformations.....	5
1.3. Infinitesimal transformation.....	7
1.4. Invariant functions.....	7
1.5. Infinitesimal generator.....	8
1.6. Point transformations and their generators.....	8
1.7. Prolongation formulae.....	9
1.8. Prolongation formulas in one dependent and three independent variables.....	11
1.9. Prolongation formulas in two dependent and two independent variables.....	14
1.10. Symmetry groups for PDE's.....	17
1.11. Determining equations.....	18
1.12. The Lie algebra constructed from the infinitesimal Operators.....	20

1.13. Construction of similarity reduction.....	22
1.14. Generating solutions by finite symmetry Transformations.....	23
1.15. Generating solutions (of linear differential equations) by applying the generators.....	26
1.16. Optimal systems of invariant solutions.....	27

CHAPTER (2)

On The Exact Solution of (2+1) - Dimensional Cubic Nonlinear Schrodinger (NLS) Equation

2.1. Introduction.....	28
2.2. Symmetry group.....	33
2.3. Reductions to ordinary differential equation.....	41
2.4. Discussion and concluding remarks.....	62

CHAPTER (3)

Some New Exact Solutions for Linear Thermoelastic System

3.1. Introduction.....	64
3.2. Statement of the problem.....	65
3.3. Symmetries and Explicit Solutions.....	65
