Aim of work	
Summary	1
Introduction	1
Lubricating oils	1
Composition of lubricating oils	1
1- Hydrocarbons	1
2- Non Hydrocarbons	2
3- Asphaltenes, Resins and oils	3
4- Trace Elements	4
Physical properties of lubricating oils	6
1- Viscosity	6
2- Viscosity index	7
3- Viscosity gravity constant	8
4- Cloud and pour points	9
5- Characterization factor	9
6- Correlation index	10
7- Flash and Fire points	10
8- Ash content	11
9- Carbon residue	11
10- Analytical Methods for determining types of sulfur compounds	12
Stuructural group Analysis	13
1- Methods of determination of structural group analysis	13

	Page
a- Direct Method	13
b- Dispersion-refraction Method	14
c- Waterman ring analysis	14
d- Density Method	14
e- n-d-M Method	15
2- Identification of the chemical composition of lubricating oils by:-.....	16
a- Infrared technique	16
b- Ultra-violet spectra	16
c- Mass spectroscopy	17
Fractionation Methods of lubricating oils.....	18
1- Distillation	19
2- Adsorption	19
3- Acid-Alkali extractions	21
4- Thermal diffusion	21
5- Urea adduction	21
6- Molecular sieves	22
7- Gas-chromatography	22
8- Clay finishing	22
Production of lubricating oils	23
Oxidation of lubricating oils	24
1- Influence of temperature	26
2- Influence of chemical composition of lubricating oils	26
3- Influence of Inhibitors	28
4- Influence of oxidation products	30
5- Influence of catalyst of metals	31
