**\*\* TABLE OF CONTENTS \*\***

=====

|                                                                                         |     |
|-----------------------------------------------------------------------------------------|-----|
| * Introduction & Aim of the work.....                                                   | 1   |
| * Review of literature :                                                                |     |
| - Evolution of specular microscopy.....                                                 | 5   |
| - Anatomy, histology & electron microscopy<br>of the corneal endothelium.....           | 14  |
| - Endothelial mitosis & endothelial wound healing.....                                  | 16  |
| - Corneal endothelium; its density and morphology<br>in relation to age & function..... | 19  |
| - Physiology of the corneal endothelium.....                                            | 25  |
| - Effect of increased intra-ocular pressure<br>on the corneal endothelial cells.....    | 30  |
| - Pharmacological considerations.....                                                   | 33  |
| - Effect of Antiglaucoma drugs on corneal endothelium...                                | 53  |
| * Subjects, Material & Methods.....                                                     | 55  |
| * Results.....                                                                          | 76  |
| * Discussion.....                                                                       | 103 |
| * Summary & Conclusions.....                                                            | 118 |
| * References.....                                                                       | 121 |
| * Arabic Summary.....                                                                   | 145 |
