## RESULTS

### **1- Control group**

#### **i. complete blood picture**

- Haemoglobin concentration : ranged between 10-145mg% with a mean of  $12.7 \pm 0.3$  mg%.
- RBCs counts ranged between 3.9-5.3 million/cmm with a mean of  $4.7 \pm 0.1$  million/cmm.
- WBCs count : ranged between 3900-9000/cmm with a mean of  $6105 \pm 393.3$ /cmm.
- Platelet count : ranged between  $170-372 \times 10^3$ /cmm with a mean of  $255 \pm 16.8 \times 10^3$ /cmm.

#### **ii. Coagulation study :**

- Prothrombin activity ranged between 73-111% with a mean of  $89.9 \pm 3.3$ %.
- Activated partial thromboplastin time ranged between 30-40.8 seconds with a mean of  $34.1 \pm 0.9$  seconds.
- Fibrinogen concentration ranged between 230-498mg% with a mean of  $345.1 \pm 22.3$ mg%.
- Activated protein C resistance : none of the control group were APC resistance positive.

**iii. Serum lipids :**

- Cholesterol concentration ranged between 152-283mg% with a mean of  $190.4 \pm 9.9$  mg%.
- Triglyceride concentration : ranged between 61-142mg% with a mean of  $101.5 \pm 6.8$ mg%.
- HDL concentration ranged between 32-55mg% with a mean of  $41.6 \pm 1.7$ mg%.
- LDL concentration ranged between 69-211mg% with a mean of  $115.5 \pm 10.4$ mg%

iv. **CRP seropositivity** :33.3% are seropositive to CRP while 66.7% are seronegative

v. **H. pylori seropositivity** :66.7% are seropositive to H. pylori while 33.3% are seronegative.

**2-Coronary heart disease (CHD) group :****i. Complete blood picture :**

- haemoglobin concentration ranged between 10.5-15mg% with a mean of  $12.2 \pm 0.5$ mg%.
- RBCs count ranged between 3.3-5.4 million/cmm with a mean of  $4.4 \pm 0.1$ million/cmm.
- WBCs count ranged between 4200-12.800/cmm with a mean of  $7836.3 \pm 403.6$ /cmm.
- Platelets count ranged between  $133-460 \times 10^3$ /cmm with a mean of

$271.7 \pm 18.1 \times 10^3 / \text{cmm}$ .

**ii. Coagulation study :**

- Prothrombin activity : ranged between 74-116% with a mean of  $92.8 \pm 2.2\%$ .
- Activated partial thromboplastin time : ranged between 29.5-41.5 seconds with a mean of  $35.4 \pm 0.6$  seconds.
- Fibrinogen concentration ranged between 204-748mg% with a mean of  $411.8 \pm 22.6\text{mg}\%$ .
- (APC) resistance : 26.7% are positive .

**iii. Serum lipids :**

- Cholesterol concentration ranged between 142-386mg% with a mean of  $224.7 \pm 10.2\text{mg}\%$ .
- Triglyceride concentration ranged between 56-302mg% with a mean of  $127.3 \pm 10.1\text{mg}\%$ .
- High density lipoprotein (HDL) concentration : ranged between 21-166mg% with a mean of  $49 \pm 5.5\text{mg}\%$ .
- Low density lipoprotein (LDL) concentration : ranged between 85.6-328 with a mean of  $157.2 \pm 10.7\text{mg}\%$ .

iv. **C-reactive protein seropositivity** : 53.3% are seropositive while 46.7% are seronegative.

v. **H. pylori seropositivity** : 83.3% are seropositive while 16.7% are seronegative.

**3-Comparison between CHD group and normal controls :****i. Risk factors :(table 1)**

- Diabetes mellitus : showed a statistically non-significant high prevalence in CHD group (63.3%) as compared to control group (33.3%),  $p>0.05$ .
- Hypertension : showed a statistically non-significant higher prevalence in CHD group (66.7%) as compared to control group (40%),  $p>0.05$ .
- Smoking habits : expressed a non- significant higher prevalence in CHD group (36.7%) as compared to control group (20%),  $p>0.05$ .
- H. pylori seropositivity : showed a statistically non-significant higher prevalence in CHD group (83.3%) as compared to (66.7%) of normal control,  $p>0.05$ .

**ii. Complete blood picture : (table 2)**

- Hemoglobin concentration : showed a non-significant lower level in CHD group ( $12.2\pm0.5\text{mg\%}$ ) as compared to ( $12.7\pm0.3\text{mg\%}$ ) control group,  $P>0.05$ .
- RBCs count : expressed a non-significant lower count in CHD group ( $4.4\pm0.1$  million/cmm) as compared to control group ( $4.7\pm0.1$  million/cmm),  $P>0.05$ .
- WBCs count : showed a significant higher count in CHD group

(7836 $\pm$ 403/cmm) as compared to control group (6105 $\pm$ 393/cmm) (p<0.05).

- Platelet count : expressed a non-significant higher count in CHD group (217.7 $\pm$ 18.1 $\times 10^3$ /cmm) as compared to normal control (255.1 $\pm$ 16.8 $\times 10^3$ /cmm), p>0.05.

**iii. Coagulation study : (table 3)**

- Prothrombin activity showed a non-significant higher level in CHD group (92.8 $\pm$ 2.2%) as compared to control group (89.9 $\pm$ 3.3%), p>0.05.
- Activated partial thromboplastin time showed a non-significant longer time in CHD group (35.4 $\pm$ 0.6 sec) as compared to normal control (34.1 $\pm$ 0.9), p>0.05.
- Fibrinogen concentration : showed a non-significant higher level in CHD group (411.8 $\pm$ 22.6mg%) as compared to normal control group (345.1 $\pm$ 22.3mg%), p>0.05.
- APC resistance positivity expressed a highly significant higher prevalence in CHD group (26.7%) as compared with the control group (0%), p<0.01.

**iv. Serum lipids and CRP : (table 4)**

- Cholesterol concentration showed a significantly higher level in CHD group (224.7 $\pm$ 10.2mg%) as compared to control group

(190.4±9.9),  $p<0.05$ .

- Triglyceride concentration expressed a significantly higher level in CHD group (127.1±10.1mg%) as compared to control group (101.5±6.8mg%),  $p<0.05$ .
- HDL : showed a non-significantly higher level in CHD group (49.0±5.5mg%) as compared to control group (41.6±1.7mg%),  $p>0.05$ .
- LDL : expressed a significantly higher level in CHD group (157.3±10.7mg%) as compared to normal control (115.5±10.4mg%),  $p<0.05$ .
- CRP seropositivity showed a non significant higher prevalence in CHD group (53.3%) as compared to normal control (33.3%),  $p>0.05$ .

#### **4-Prevalence of H. pylori infection in the study group : (table 5)**

It was 77.8%

#### **5-Comparison between H. pylori seropositive and H. pylori seronegative in CHD group:**

##### **i. Risk factors:(table6)**

- Diabetes : showed statistically non-significant higher prevalence in HP+ve group (64%) more than HP -ve group (60%),  $p>0.05$ .
- Hypertension : expressed a non significant higher prevalence in

HP +ve group (64%) more than HP -ve group (60%),  $p>0.05$

- Smoking habits : showed a non-significant lower prevalence in HP+ve group (36%) more than HP -ve group (40%),  $p>0.05$ .

**ii. Complete blood picture : table (7)**

- Haemoglobin concentration : showed a non-significant low level in HP +ve group ( $12.1\pm0.5\text{mg\%}$ ) as compared to HP -ve group ( $12.9\pm0.4\text{mg\%}$ ),  $p>0.05$ .
- RBCs count : expressed a highly significant lower count in HP +ve group ( $4.3\pm0.1$  million/cmm) than in HP-ve group ( $4.9\pm0.1$ ),  $p<0.01$ .
- WBCs count : showed a non significant higher count in Hp+ve group ( $8013\pm402.8/\text{cmm}$ ) than in HP-ve group ( $6950\pm1408.4/\text{cmm}$ ),  $p>0.05$ .
- Platelet count showed a significantly high count in HP +ve group ( $288\pm18.9\times10^3/\text{cmm}$ ) as compared to HP-ve ( $190\pm38.7\times10^3/\text{cmm}$ ),  $p<0.05$ .

**iii. Coagulation study : table (8)**

- Prothrombin activity expressed a non significant higher activity in HP+ve group ( $92.9\pm2.3\%$ ) than HP -ve group ( $91.4\pm7.0$ ),  $p>0.05$ .

- 
- Activated partial thromboplastin time expressed a non significant short time in HP +ve group ( $35.3 \pm 7$  second) as compared to HP -ve group ( $36.2 \pm 1.5$  second).
  - Fibrinogen concentration showed a significantly higher concentration in HP +ve ( $427.2 \pm 12.5$ mg%) more than in HP -ve group ( $334.6 \pm 39.3$ mg%),  $p < 0.05$
  - APC resistance : showed a non-significant higher prevalence in HP +ve group (32%) than in HP -ve group (0%),  $p > 0.05$ .

**iv. Serum lipids and CRP :(table 9)**

- Cholesterol level showed a non-significant high level in HP+ve group ( $227.1 \pm 12$ mg%) as compared to HP-ve group ( $212.6 \pm 13.3$ mg%),  $p > 0.05$ .
  - Triglyceride level showed a non significant high level in HP+ve group ( $132.4 \pm 11.3$ mg%) as compared to HP-ve group ( $100.6 \pm 20.1$ mg%),  $p > 0.05$ .
  - HDL level expressed a non significant low level in HP +ve group ( $48.8 \pm 6.3$ mg%) as compared to HP -ve group ( $50.0 \pm 11.2$ mg%),  $p > 0.05$
  - LDL concentration showed a non significant higher level in HP +ve group ( $160.1 \pm 12.1$ mg%) than ( $142.6 \pm 23.3$ mg%) of HP -ve group.
  - CRP seropositivity showed a significantly higher prevalence in
-

HP +ve group (64%) than in HP -ve group (0%),  $p < 0.05$ .

**6-Comparison between H.pylori seronegative and H.pylori serpositive in control group :**

**i. Risk factors : (table10)**

- Diabetes mellitus : showed a non significant high prevalence in HP +ve (50%) than HP -ve (0%) group,  $p > 0.05$ .
- Hypertension : showed a non-significant high prevalence in HP+ve (50%) as compared to HP-ve group (20%),  $p > 0.05$ .
- Smoking : expressed an equal prevalence in both HP+ve and HP-ve groups ,each is (20%).

**ii. Complete blood picture (table11)**

- Haemoglobin concentration : showed a higher concentration of HP+ve group ( $13.1 \pm 0.3 \text{mg\%}$ ) than HP-ve group ( $12.1 \pm 0.9 \text{mg\%}$ ) which is non-significant.
- RBCs count showed a non-significant higher count in HP+ve group ( $4.8 \pm 0.1 \text{million/cmm}$ ) than HP-ve ( $4.3 \pm 0.3 \text{million /cmm}$ )
- WBCs count : expressed a non significant high count in HP+ve ( $6700 \pm 129.4/\text{cmm}$ ) as compared to HP-ve ( $6026 \pm 1844.9/\text{cmm}$ )
- Platelet count : showed a non-significant high count in HP+ve group ( $289.3 \pm 23.9 \times 10^3/\text{cmm}$ ) as compared to HP-ve group ( $239.3 \pm 20.9 \times 10^3/\text{cmm}$ ),  $p > 0.05$ .

**iii. Coagulation study :(table12)**

- Prothrombin activity : showed a non-significant lower activity in HP+ve ( $89.8 \pm 4.8\%$ ) as compared to HP-ve group ( $94.6 \pm 2.9\%$ ),  $p > 0.05$ .
- APTT : expressed a non-significant longer time in HP +ve ( $34.3 \pm 1.0$ sec.) than HP-ve ( $33.7 \pm 1.9$  sec.),  $p > 0.05$ .
- Fibrinogen : showed a non-significantly high level in HP+ve group ( $353.2 \pm 59.6$ mg%) as compared to HP-ve group ( $341.2 \pm 19.8$ mg%).

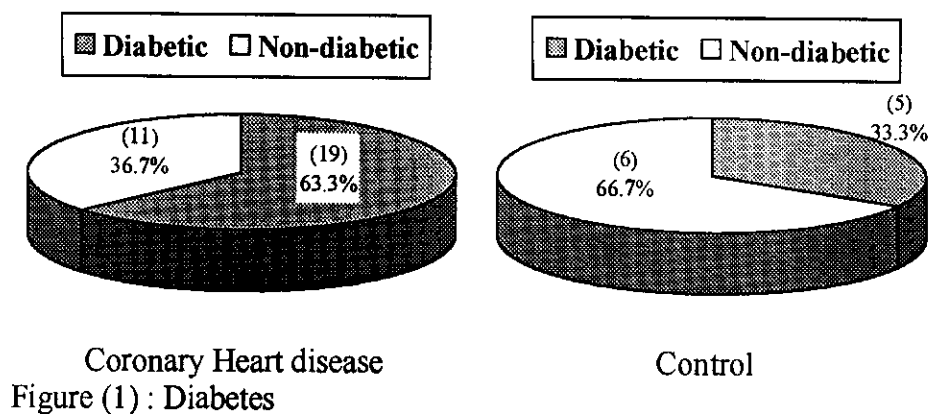

**iv. Serum lipids and CRP:(table13)**

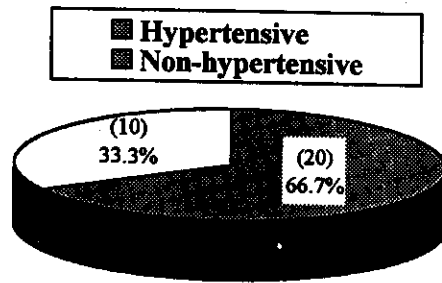

- Cholesterol concentration showed a significantly higher level of cholesterol in HP+ve ( $206.3 \pm 12.1$ mg%) than HP-ve ( $158.6 \pm 2.7$ mg%),  $p < 0.05$ .
- Triglyceride concentration expressed a non-significant high level in HP +ve group ( $106 \pm 8.3$ mg%) as compared HP -ve group ( $92.2 \pm 12.3$ mg%),  $p > 0.05$ .
- HDL concentration showed a non-significant low level in HP+ve group ( $40.8 \pm 1.1$ mg%) as compared to HP-ve ( $43.2 \pm 4.9$ mg%).
- LDL concentration showed a non-significant low level in HP+ve group ( $114.9 \pm 10.8$ mg%) as compared to HP -ve group ( $116.6 \pm 24.8$ mg%).
- CRP seropositivity showed a non-significant high prevalence in

HP+ve group (40%) as compared to HP-ve group (20%).

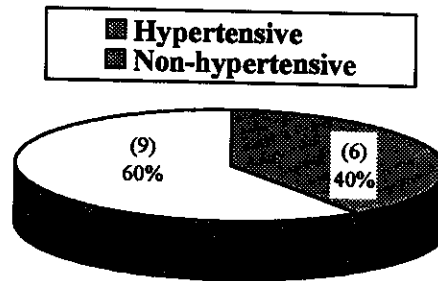

Table (1) :

	Coronary heart disease N=30	Control N=15	Significance
