# **CONTENTS**

|                                                                              |    |
|------------------------------------------------------------------------------|----|
| ● INTRODUCTION.....                                                          | 1  |
| ● AIM OF THE WORK.....                                                       | 3  |
| ● REVIEW OF LITERATURE.....                                                  | 4  |
| ○ NON-ALCOHOLIC FATTY LIVER DISEASE:                                         |    |
| ● Definition and prevalence and epidemiology.....                            | 4  |
| ● Causes.....                                                                | 5  |
| ● Pathogenesis.....                                                          | 7  |
| ● Symptoms and signs.....                                                    | 15 |
| ● Laboratory abnormalities.....                                              | 15 |
| ● Imaging studies.....                                                       | 16 |
| ● Histological findings.....                                                 | 17 |
| ● Diagnosis of nonalcoholic fatty liver disease.....                         | 21 |
| ● Management.....                                                            | 21 |
| ○ INSULIN RESISTANCE:                                                        |    |
| ● Definition.....                                                            | 26 |
| ● Factors associated with insulin resistance likelihood.....                 | 26 |
| ● Pathogenesis.....                                                          | 27 |
| ● Causes.....                                                                | 33 |
| ● Sequels of insulin resistance.....                                         | 36 |
| ● Diagnosis of insulin resistance.....                                       | 40 |
| ● Treatment of insulin resistance.....                                       | 41 |
| ○ ADIPONECTIN:                                                               |    |
| ● Definition.....                                                            | 46 |
| ● The form and the concentration of the adiponectin.....                     | 47 |
| ● Plasma membrane receptors and the control of adiponectin<br>synthesis..... | 47 |
| ● Physiology and pathophysiology of the adiponectin.....                     | 48 |
| ● Adiponectin and thiazolidinediones.....                                    | 54 |

---

---

|                                                                                                            |    |
|------------------------------------------------------------------------------------------------------------|----|
| ● Adiponectin and the endocannabinoid system.....                                                          | 55 |
| ● Role of adiponectin in the clinical practice.....                                                        | 55 |
| ○ <b>THE RELATIONS BETWEEN NON-ALCOHOLIC FATTY LIVER DISEASE, INSULIN RESISTANCE AND ADIPONECTIN</b> ..... | 56 |
| ● <b>SUBJECTS AND METHODS</b> .....                                                                        | 58 |
| ● <b>STATISTICS</b> .....                                                                                  | 63 |
| ● <b>RESULTS</b> .....                                                                                     | 66 |
| ● <b>DISCUSSION</b> .....                                                                                  | 81 |
| ● <b>SUMMARY AND CONCLUSION</b> .....                                                                      | 94 |
| ● <b>RECOMMENDATIONS</b> .....                                                                             | 98 |
| ● <b>REFERENCES</b> .....                                                                                  | 99 |
| ● <b>ARABIC SUMMARY</b>                                                                                    |    |
