

CONTENTS

	Page
I- Introduction	1
II- Review of Literature	5
1- Soybean	5
2- Sorghum	6
3- Fungi and environment	7
3.1. Fungi and human beings	9
3.2. Fungi and animal health	11
3.3. Fungi and plant health	11
4- Aflatoxin	13
4.1. Definition	13
4.2. Aflatoxin production	14
4.2.1. In natural commodities	14
4.2.2. In artificially inoculated commodities	14
5- Factors affecting aflatoxin production	16
5.1. Nutritional factor	16
5.2. Incubation temperature	18
5.3. Incubation time	20
5.4. pH	21
5.5. Moisture	21
5.6. Relative humidity and water activity	22
5.7. Aeration	23
5.8. Effect of fatty acids on aflatoxin production	23
6- Chemical composition of healthy soybean (<i>Glycine max</i> L.) seeds	25
6.1. Fatty acid composition of soybean oil	31
6.2. Physical properties of soybean oil	34
6.3. Effect of storage condition on chemical composition of soybean seeds.	34
6.4. Effect of storage on the fatty acid composition of soybean oil	38
6.5. Effect of storage on physical and chemical properties of soybean oil	39
7- Chemical composition of healthy sorghum (<i>sorghum bicolor</i>) grains	41
7.1. lipid content of sorghum grains	44
7.2. Fatty acids of sorghum grains.	45
7.3. Tannins of sorghum grains.	46
7.4. Effect of storage on chemical composition of sorghum grains.	50

III- Materials and Methods	55
1- Materials	55
1.1. (Mold) fungi	55
1.2. Media	55
1.3. Solvents and reagents	56
1.3.1. Solvents	56
1.3.2. Reagents	56
1.4. Apparatus and equipment	57
1.5. Labware	57
2- Methods	58
2.1. Isolation of molds from tested foodstuff.	58
2.2. Purification of isolated molds	59
2.3. Maintenance of isolated molds	59
2.4. Identification of molds	60
3- Inoculation technique	60
3.1. Preparation of inoculum	60
3.2. Preparation of foodstuff samples	61
4- Storage conditions	63
5- Aflatoxin Extraction	63
5.1. From <i>in vitro</i> (fungal cultures)	63
5.2. From the tested foodstuff inoculated by potential toxigenic molds isolated in this study.	64
6- Aflatoxin separation	64
6.1. Thin layer chromatography (TLC).....	64
6.2. Immunoaffinity column assay (ICA)	66
6.3. High performance liquid chromatography with fluorescence (HPLC)	66
7. Confirmation of identities of aflatoxin	71
8. Detection of aflatoxins	71
8.1. Qualitative estimation of aflatoxin extracts	72
8.2. Quantitative estimation of aflatoxin	72
8.3. Immunoassay (immunoaffinity column)	73
8.4. Quantitative analysis by HPLC	74
9. Chemical analysis of foodstuff samples	74
9.1. Determination of moisture content	74
9.2. Determination of crude fiber	74
9.3. Determination of ash content	75
9.4. Determination of protein content.....	75
9.5. Determination of oil content	75
9.6. Determination of tannin content	76
9.7. Determination of total carbohydrates	76
9.8. Extraction and determination of total soluble sugars.	77

9.9. Determination of reducing sugar.	77
9.10. Determination of non reducing sugar.	79
9.11. Lipid extraction	79
9.12. Determination of fatty acids and unsaponifiable matter	79
