	PAGE
(1) INTRODUCTION	1
(2) REVIEW OF LITERATURE	3
PART I : ECOLOGICAL STUDIES	3
- Seasonal abundance of the white peach or mulberry scale insect, <i>Pseudaulacaspis</i> <i>pentagona</i> (Targioni-Tozzetti 1886) in relation to the abiotic and biotic factors	3
PART II : TOXICOLOGICAL STUDIES	6
-Toxicological studies on the white peach scale insect ; <i>Pseudaulacaspis</i> <i>pentagona</i> (Targioni)	6
(3) MATERIAL AND METHODS	14
PART I : ECOLOGICAL STUDIES	14
1- Seasonal abundance of <i>P. pentagona</i> (Targioni) in relation to the abiotic and biotic factors at Dakahliya.....	14
a) Area of Experiments	14
b) Experimental design	14
c) Sampling and Assessment	14
d) Laboratory examination	15
e) The monthly variations	15
f) The number of generations.....	15
g) The biotic factors.....	15
h) The abiotic factors.....	16
i) Statistical analysis.....	16
2- Relationship between abiotic and biotic factors on the fluctuation of <i>P. pentagona</i> (Targioni) population and number of annual generations.....	16
A) Efficacy of abiotic and biotic factors on the fluctuation of <i>P. pentagona</i> (Targioni) population on peach trees.....	16
B) Efficacy of climatic factors on <i>P. pentagona</i> (Targioni) annual generations on peach trees :-.....	17
C) Efficacy of climatic factors on the <i>P. pentagona</i> (Targioni) associated parasitoid ; <i>Aphytis</i> sp on peach trees	18
PART II : Toxicological Studies of <i>Pseudaulacaspis pentagona</i> (Targioni) infesting peach trees	18
a)Experimental design:.....	18
b) The first experiment :	19
c) The second experiment:	19
d) Field work procedure :	20
e) Sampling :	21
f) Statistical analysis :	21

(4) RESULTS AND DISCUSSION	23
PART I : ECOLOGICAL STUDIES	23
(1) Seasonal abundance of the White peach scale insect, <i>Pseudauleacaspis pentagona</i> (Targioni – Tozzetti 1886) in relation to the abiotic and biotic factors at Dakahliya.....	23
1- Seasonal abundance of <i>P. pentagona</i> (Targioni) total population on peach trees.....	24
2- Seasonal abundance of <i>P. pentagona</i> (Targioni) different stages on peach trees.....	28
3- The monthly variations (V.)	32
4- Number of <i>P. pentagona</i> (Targioni) generations on peach trees	35
(2) Seasonal abundance of <i>Aphytis</i> sp as a mortality biotic factor influencing <i>P. pentagona</i> (Targioni) population density on peach trees at Dakahliya	39
1- Seasonal abundance of <i>P. pentagona</i> parasitoid ; <i>Aphytis</i> sp. total population on peach trees.....	42
2- Seasonal abundance of <i>P. pentagona</i> parasitoid ; <i>Aphytis</i> sp different stages on peach trees	44
3- The parasitic role of <i>Aphytis</i> sp as biotic mortality Factor influencing <i>P. pentagona</i> (Targioni) population density	46
(3) Relationship between the abiotic and biotic factors on the fluctuation of <i>P. pentagona</i> (Targioni) total population and number of annual generations on peach trees	48
A) Efficacy of abiotic and biotic factors on the fluctuation of <i>P. pentagona</i> (Targioni) population on peach trees	48
B) Efficacy of climatic factors on <i>P. pentagona</i> (Targioni) annual generations on peach trees	51
.....	
a- Effect of day maximum temperature (D.Mx.T.)	51
b- Effect of night minimum temperature (N.Mn.T.)	56
c- Effect of day mean relative humidity (D.M.R.H)	56
d- Effect of day light period (D.L.P.)	57
C) Efficacy of the climatic factors on the <i>P. pentagona</i> (Targioni) associated parasitoid; <i>Aphytis</i> sp on peach trees	57
PART II : TOXICOLOGICAL STUDIES	61
- Toxicological studies on <i>Pseudauleacaspis pentagona</i> (Targioni) infesting peach trees at Meet-Ghamer, Dakahliya	61
.....	
1- The first Experiment (on early December 2000)	61
1) Bio-residual effect of the tested oils on <i>P. pentagona</i> (Targioni) different stages.....	63
2) Bio-residual effect of the tested oils on <i>P. pentagona</i> (Targioni) total population.....	68
a) The first post treatment count (one month after oils spraying)	70
b) The second post treatment count (three months after winter spraying)	70
c) The third post treatment count (six months after winter spraying)	71
3) Deleterious efficacy of the tested oils on <i>P. pentagona</i> (Targioni) associated parasitoid <i>Aphytis</i> sp. on peach trees at Dakahliya	71

	PAGE
2- The second experiment on peach trees	72
1) Bio-residual effect of the tested treatment on <i>P. pentagona</i> (Targioni) different stages.....	72
a) The first post treatment count (one month after winter spraying).....	76
b) The second post treatment count (three months after winter spraying)	79
c) The third post treatment count (six months after spraying)	79
2) Bio-residual effect of the tested treatments on <i>P. pentagona</i> (Targioni) total population.....	79
a) The first post treatment count (one month after winter spraying).....	81
b) The second post treatment count (three months after winter spraying)	81
c) The third post treatment count (six months after spraying)	81
3) Deleterious efficacy tested of the pesticides on <i>P. pentagona</i> (Targioni) associated parasitoid <i>Aphytis</i> sp. on peach trees at Dakahliya	82
