

Contents

CHAPTER (1): INTRODUCTION	page
Types of inhibitors	2
Corrosion prevention	4
Anodic protection	6
Cathodic protection	6
The limitation and use of inhibitors	6
Correlation between inhibition and stability of organic compounds	7
Inhibition by chemically stable surface active organic compounds	7
Inhibition by chemically unstable surface active organic compounds	7
Protenation	8
Reduction	8
Polymerization	8
Adsorption isotherm	9
Aim of the present work	39
CHAPTER (II): EXPERIMENTAL	
Chemical composition of the investigated materials	40
Test specimens and treatment	40

Weight loss measurements	40
Galvanostatic polarization measurements	40
Materials and solutions	41
Inhibitors	41
Preparation of inhibitors used	44
Solutions	45
Procedure used for corrosion measurements	46
Galvanostatic polarization measurements	47
The corrosion cell	47
CHAPTER (III): RESULTS AND DISCUSSION	50
Corrosion inhibition of C-steel in acid chloride solution by some indole derivatives.	50
Effect of 4-phenyl azo-2-(indol-2-yl)phenol concentration	51
Effect of type of the substituted group	56
Effect of substituent position	60
Effect of temperature	61
SUMMARY	118
REFERENCES	121
ARABIC SUMMARY	133
