

RESULTS

Table (10): Age in the studied patients (n=61).

	Age (years)
<i>Mean</i>	35.84
<i>SD</i>	± 8.08
<i>Range</i>	15 - 57

Table (11): Distribution of the studied patients according to clinical data

	<i>No.</i>	<i>%</i>
<i>CRF</i>	9	14.8%
<i>Cystitis</i>	9	14.8%
<i>Sterile pyuria</i>	2	3.3%
<i>UTI</i>	6	9.8%
<i>Haematuria</i>	2	3.3%
<i>TB</i>	13	21.3%
<i>Kidney donor</i>	7	11.5%
<i>Renal stone</i>	3	4.9%
<i>Dysuria</i>	3	4.9%
<i>TB treatment</i>	3	4.9%
<i>Burning micturition</i>	2	3.3%
<i>Pain at ejaculation</i>	1	1.6%
<i>Transurethral pain</i>	1	1.3%
<i>Total</i>	61	100%

Figure (14): Distribution of the studied patients according to clinical data

Table (12): Distribution of the studied patients according to ZN result

	<i>No.</i>	<i>%</i>
<i>Positive</i>	41	67.2%
<i>Negative</i>	20	32.8
<i>Total</i>	61	100%

**Figure (15): Distribution of studied patients according to ZN result**

Table (13): Distribution of the studied patients according to PCR result

	<i>No.</i>	<i>%</i>
<i>Positive</i>	56	91.8%
<i>Negative</i>	5	8.2%
<i>Total</i>	61	100%

**Figure (16): Distribution of studied patients according to PCR result**

Table (14): Distribution of the studied patients according to fast plaque

	<i>No.</i>	<i>%</i>
<i>Positive</i>	51	83.6%
<i>Negative</i>	10	16.4%
<i>Total</i>	61	100%

**Figure (17): Distribution of studied patients according to fast plaque**

**Table (15): Comparison between fast plaque
test results and ZN test results (n=61)**

	<i>ZN</i>		<i>X²</i>	<i>P</i>
	<i>+ve</i>	<i>-ve</i>		
<i>Fast plaque:</i>				
<i>Positive</i>	34	17	0.042	>0.05
<i>Negative</i>	7	3		

There is non-significant difference between results of fast plaque test results and that of ZN test at 0.05 level of significance.

**Table (16): Comparison between fast plaque
and L-J test results (n=61)**

	<i>L-J</i>		<i>Total</i>	<i>X²</i>	<i>P</i>
	<i>+ve</i>	<i>-ve</i>			
<i>Fast plaque:</i>					
<i>Positive</i>	46	5	51	1.068	>0.05
<i>Negative</i>	2	8	10		
<i>Total</i>	48	13	61		

There is non-significant difference between results of fast plaque test results and that of PCR test at 0.05 level of significance.

- Sensitivity= 0.96
- Specificity= 0.62
- Accuracy= 0.89
- Positive predictive value= 0.90
- Negative predictive value= 0.80

**Table (17): Comparison between fast plaque
test results and PCR test results (n=61)**

	<i>PCR</i>		X^2	<i>P</i>
	<i>+ve</i>	<i>-ve</i>		
<i>Fast plaque:</i>				
<i>Positive</i>	46	5	1.068	>0.05
<i>Negative</i>	10	0		

There is non-significant difference between results of fast plaque test results and that of PCR test at 0.05 level of significance.

**Table (18): Comparison between PCR
and Zeil Neelsen test results (n=61)**

	<i>ZN</i>		<i>Total</i>	<i>X²</i>	<i>P</i>
	<i>+ve</i>	<i>-ve</i>			
<i>PCR:</i>					
<i>Positive</i>	41	15	56	11.17	<0.001
<i>Negative</i>	0	5	5		
<i>Total</i>	41	20	61		

There is a highly significant difference between results of Zeil Neelsen results and that of PCR test at 0.05 level of significance.

- Sensitivity= 1.00
- Specificity= 0.25
- Accuracy= 0.75
- Positive predictive value= 0.0.73
- Negative predictive value= 1.00

**Table (19): Comparison between PCR
and L-J test results (n=61)**

	<i>L-J</i>		<i>Total</i>	<i>X²</i>	<i>P</i>
	<i>+ve</i>	<i>-ve</i>			
<i>PCR:</i>					
<i>Positive</i>	45	11	56	1.13	>0.05
<i>Negative</i>	3	2	5		
<i>Total</i>	48	13	61		

There is a non-significant difference between results of L-J results and that of PCR test at 0.05 level of significance.

- Sensitivity= 0.94
- Specificity= 0.15
- Accuracy= 0.77
- Positive predictive value= 0.80
- Negative predictive value= 0.40

**Table (20): Comparison between L.J
and ZN test results (n=61)**

	<i>L-J</i>		<i>Total</i>	<i>X²</i>	<i>P</i>
	<i>+ve</i>	<i>-ve</i>			
<i>ZN:</i>					
<i>Positive</i>	32	16	48	0.03	>0.05
<i>Negative</i>	9	4	13		
<i>Total</i>	41	20	61		

There is a non-significant difference between results of L-J results and that of ZN staining at 0.05 level of significance.

- Sensitivity= 0.78
- Specificity= 0.20
- Accuracy= 0.59
- Positive predictive value= 0.67
- Negative predictive value= 0.31

Table (21): Comparison between fast plaque test versus ZN smears, LJ culture and PCR

	FastPlaque test	
	Positive	Negative
Z.N. smears		
Positive	34	7
Negative	17	3
T	51	10
Chi ²	0.042	
P	>0.05	
Culture on LJ		
Positive	46	2
Negative	5	8
T	51	10
Chi ²	24.57	
P	<0.001	
PCR		
Positive	46	10
Negative	5	0
T	51	10
Chi ²	1.068	
P	>0.05	

This table shows the following:

- 1) FPTB correlates very highly with culture.
- 2) PCR correlates very highly with ZN staining method.
- 3) No correlation was found between FPTB and neither ZN nor PCR.
- 4) The highest percentage of isolation belongs to PCR technique followed by FastPlaque, then LJ, & lastly ZN.

**Table (22): Sensitivity, specificity, PPV
and NPV of ZN, LJ and PCR tests**

	FPTB			
	<i>Sensitivity</i>	<i>Specificity</i>	<i>PPV</i>	<i>NPV</i>
ZN	83	15	0.67	0.3
LJ	96	62	0.9	0.8
PCR	83	0	0.9	0

This table that ZN showed the highest sensitivity and LJ showed the highest specificity.
