LIST OF FIGURES	
AIM OF THE WORK	
SUMMARY	I
1. INTRODUCTION	1
1.1. Literature survey	4
1.1.1. Thermal cracking of polyethylene	4
1.1.2. Catalytic cracking of polyethylene	7
1.1.2.1. Catalytic cracking of high density polyethylene	7
1.1.2.2. Catalytic cracking of low density polyethylene	18
1.1.2.3. Catalytic cracking of medium density polyethylene.....	22
1.1.3. Zeolites	22
1.1.3.1. Classification of zeslites	23
1.1.3.1a. Mineral zeolites	23
1.1.3.1b. Synthetic zeolites	25
1.1.3.2. Structural characteristics of mordenite	28
1.1.3.3. Acidity of zeolite	28
1.1.4. Alumina	30
2. EXPERIMENTAL	32
2.1. Materials	32
2.2. Catalysts	32
2.3. Apparatus and procedure	33
2.4. Product analysis	34

3. RESULTS AND DISCUSSION.....	39
3.1. Total conversion of low density polyethylene	39
3.1.1. Effect of reaction temperature	39
3.1.2. Effect of operating pressure	40
3.1.3. Effect of reaction period	41
3.2. Production of liquid fraction	48
3.2.1. Effect of reaction temperature	48
3.2.2. Effect of operating pressure	48
3.2.3. Effect of reaction period	49
3.3. Production of gasoline fraction	53
3.3.1. Effect of reaction temperature	53
3.3.2. Effect of operating pressure	53
3.3.3. Effect of reaction period	54
3.4. Production of kerosine fraction	59
3.4.1. Effect of reaction temperature	59
3.4.2. Effect of operating pressure	60
3.4.3. Effect of reaction period	60
3.5. Production of gas fraction	64
3.5.1. Effect of reaction temperature	64
3.5.2. Effect of operating pressure	64
3.5.3. Effect of reaction period	65
3.6. Composition of the gas fraction	69
3.6.1. Effect of reaction temperature	69
3.6.2. Effect of operating pressure	69
3.6.3. Effect of reaction period	70
3.7. Semisolid residue in the reaction product.....	80
3.7.1. Effect of reaction temperature	80
3.7.2. Effect of operating pressure	80
3.7.3. Effect of reaction period.....	81

3.8. Coke deposition on the catalyst	85
3.8.1. Effect of reaction temperature	85
3.8.2. Effect of operating pressure	85
3.8.3. Effect of reaction period	86
3.9. Total iso- paraffins in gasoline fraction	90
3.9.1. Effect of reaction temperature	90
3.9.2. Effect of operating pressure	90
3.9.3. Effect of reaction period	91
3.10. Total aromatics in gasoline fraction	101
3.10.1. Effect of reaction temperature	101
3.10.2. Effect of operating pressure	101
3.10.3. Effect of reaction period	102
3.11. Individual aromatics in gasoline fraction	106
3.11.1. Effect of reaction temperature	106
3.11.2. Effect of operating pressure.	106
3.11.3. Effect of reaction period	108
3.12. Normal paraffins in gasoline fraction	115
3.12.1. Effect of reaction temperature	115
3.12.2. Effect of operating pressure	115
3.12.3. Effect of reaction period	116
3.13. Carbon number distribution in the gasoline fraction	120
3.14. Kinetic approach.	126
3.14.1. Kinetic order of the hydroconversion of polyethylene	126
3.14.2. Activation energy determination	126
4. CONCLUSIONS	130
REFERENCES	133
ARABIC SUMMARY	

LIST OF TABLES

Table no.	Title	Page
Ia.	Early classification of zeolite minerals	26
Ib.	Typical unit cell composition of some synthetic zeolites	27
Ic.	Physical properties of the NiO- $\text{WO}_3/\text{Al}_2\text{O}_3$ catalyst	32
1.	Distribution of the hydroconversion products of LDPE as a function of reaction temperature at 7.0 MPa operating pressure and 1.0h reaction period using NiWS/ Al_2O_3 catalyst	42
2.	Distribution of the hydroconversion products of LDPE as a function of reaction temperature at 7.0 MPa operating pressure and 1.0h reaction period using Pt/H-MOR catalyst.	42
3.	Distribution of the hydroconversion products of LDPE as a function of operating pressure at 450°C reaction temperature and 1.0h reaction period using NiWS/ Al_2O_3 catalyst.	43
4.	Distribution of the hydroconversion products of LDPE as a function of operating pressure at 450°C reaction temperature and 1.0h reaction period using Pt/ H-MOR catalyst.	43
5.	Distribution of the hydroconversion products of LDPE as a function of reaction period at 450°C reaction temperature and 7.0 MPa operating pressure using NiWS/ Al_2O_3 catalyst.	44
6.	Distribution of the hydroconversion products of LDPE as a function of reaction period at 450°C reaction temperature and 7.0 MPa operating pressure using Pt/ H-MOR catalyst.	44
7.	Distribution of gaseous products from the hydroconversion of LDPE as a function of reaction temperature at 7.0 MPa	

	operating pressure and 1.0 h reaction period using NiWS/Al ₂ O ₃ catalyst.	71
8.	Distribution of gaseous products from the hydroconversion of LDPE as a function of reaction temperature at 7.0 MPa operating pressure and 1.0 h reaction period using Pt/ H-MOR catalyst.	71
9.	Distribution of gaseous products from the hydroconversion of LDPE as a function of operating pressure at 450°C reaction temperature and 1.0h reaction period using NiWS/Al ₂ O ₃ catalyst.	72
10.	Distribution of gaseous products from the hydroconversion of LDPE as a function of operating pressure at 450°C reaction temperature and 1.0h reaction period using Pt /H- MOR catalyst.	72
11.	Distribution of gaseous products from the hydroconversion of LDPE as a function of reaction period at 450°C reaction period and 7.0 MPa operating pressure using NiWS/ Al ₂ O ₃ catalyst.	73
12	Distribution of gaseous products from the hydro conversion of LDPE as a function of reaction period at 450°C reaction temperature and 7.0 MPa operating pressure using Pt/ H-MOR catalyst. .	73
13.	Gasoline components distribution as a function of reaction temperature at 7.0 MPa operating pressure and 1.0h reaction period using NiWS/Al ₂ O ₃ catalyst.	92
14.	Gasoline components distribution as a function of reaction temperature at 7.0 MPa operating pressure and 1.0h reaction period using Pt/H- MOR catalyst. .	93
15.	Gasoline components distribution as a function of operating
