Acknowledgement	(i)
Abstract	(ii)
Chapter (I):Introduction	(1)
Chapter (II):Formulation of the boundary value	
Problem and its solution	(6)
2-1. Geometry of the boundary value problem	(6)
2-2. Dynamics of flow	(8)
2-3. Method of perturbation	(10)
2-4. First-order approximation	(11)
2-5. Second-order approximation	(15)
2-5-1. Construction of the Green's function	(12)
2-5-2. Determination of the function $\psi^p(\zeta, \theta, \varphi)$	(22)
2-5-3. Second-order stream-function $\psi_2(\zeta, \theta)$	(27)
Chapter(III):Distribution of stresses, forces and	
torques at the boundaries	(29)
3-1. Determination of the relevant Rivlin-Ericksen tensors	(30)
3-2. Evaluation of the surface traction $\underline{s}(\zeta, \theta)$	(36)
3-3. Determination of the resultant forces	(37)
3-4. Determination of the resultant torques	(41)
Chapter (IV):Results and discussion	(44)
Appendix :Prolate spheroidal coordinates	(61)
