PART I

* PREFACE	1
* INTRODUCTION	3
I- Thermophilic bacteria	3
II- Alkalophilic bacteria.....	9
III- Microbial protease(s)	18
IV- parameters controlling Microbial protease(s) Biosynthesis.....	21
V- Purification of Microbial protease(s).....	29
VI- Some Parameters controlling the activity of the purified microbial protease(s).....	31
VII- Amino acid analysis	36
 * MATERIALS AND METHODS :	
I- Soil samples.....	38
II- Enrichment of soil samples in thermo-alkalophilic bacteria.....	38
III- Seeding of isolation plates.....	38
IV- Purification of colonies of thermo-alkalophilic bacteria.....	40
V- Screening for proteolytic activities of the isolated bacteria.....	41
VI- Identification of the proteolytic thermophilic and alkalophilic bacteria.....	41
A- Morphological and cultural characteristics.....	42
B- Physiological and biochemical characteristics.....	42
VII- Physiological and enzymological studies using <i>B. stearothermophilus</i> , S - WN 1616 B which secretes the highest yield of protease(s) enzyme(s) under thermophilic-alkalophilic growth conditions	43
A- Production of protease(s) enzyme(s) under thermo- alkalophilic conditions.....	43
1- Organism used.....	43
2- Production medium.....	44
B- Protease(s) determination.....	44
1- Protease(s) assay medium.....	44
2- Protease(s) assay.....	44
3- Construction of a standard curve of protease(s) enzyme.....	45
4- Protein determination	45

C- Parameters controlling protease(s) production by <i>Bacillus</i> <i>stearothermophilus</i> S-WN 1616 B.....	45
1- Different inocula sizes.....	45
2- Different incubation periods.....	50
3- Different incubation temperatures.....	50
4- pH.....	50
5- Different buffers applied at different pH values.....	51
6- Supplying different concentrations of NaCl.....	51
7- Different amino acids.....	52
8- Inorganic nitrogen sources.....	52
9- Elimination of one or more of the ingredients of the production medium.....	53
10- Different organic sources.....	53
11- Vitamins.....	54
12- Introducing microelements.....	54
D- Purification of protease(s) under thermo-alkalophilic conditions.....	54
1- Preparation of the cell free filtrate.....	55
2- Ammonium sulfate precipitation.....	55
3- Dialysis against distilled water.....	56
4- Dialysis against sucrose.....	56
5- Gel filtration by sephadex G-200 column chromatography.....	56
6- Gel filtration with sephadex G-100 column chromatography.....	57
E- Parameters regulating the activity of the purified thermo- alkaline protease(s) produced by <i>B. stearothermophilus</i> S-WN 1616 B.....	58
1- Temperature.....	58
2- Different pH values.....	58
3- Incubation periods.....	58
4- Different substrate concentrations.....	58
5- Activators and inhibitors.....	59
6- Heat stability.....	59
F- Amino acid analysis	59
1- Hydrolyzate preparation.....	60
2- Elution buffer and detection reagent.....	60

PART II

	Page
* Counts, isolation, purification and identification of thermo-alkalophilic bacteria isolated from different regions of Egypt.....	61
1- Determination of total counts of thermo-alkalophilic bacteria in the enriched collected soil samples.....	61
2- Incidence of thermo-alkalophilic bacterial isolates in relation to their mother soils, numbers and percentages.....	63
3- Screening of proteolytic activities of thermo-alkalophilic bacterial isolates and their growth intensities at pH12 and 65°C.....	67
4- Morphological, physiological and biochemical characteristics of the 16 bacterial isolates selected for complete identification.....	67
A- Cultural characteristics.....	72
B- Morphological characteristics.....	72
C- Physiological characteristics.....	72
D- Motility.....	73
E- Taxonomic identification	73
1- <i>Bacillus stearothermophilus</i> S-WN 701 A.....	75
2- <i>Bacillus stearothermophilus</i> S-QG 3403 K.....	75
3- <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	76
4- <i>Bacillus stearothermophilus</i> S-WN 1515 A.....	78
5- <i>Bacillus stearothermophilus</i> S-WN 1201.....	78
6- <i>Bacillus stearothermophilus</i> S-WN 305 B.....	80
7- <i>Bacillus stearothermophilus</i> S-PS 2305.....	80
8- <i>Bacillus stearothermophilus</i> S-AS 2716 A.....	82
9- <i>Bacillus stearothermophilus</i> S-AS 2715 A.....	84
10- <i>Bacillus stearothermophilus</i> S-WN 611.....	84
11- <i>Bacillus stearothermophilus</i> S- PS 2801G.....	85
12- <i>Bacillus stearothermophilus</i> S-QG 3403 B.....	87
13- <i>Bacillus stearothermophilus</i> S-QG 3503 B.....	87
14- <i>Bacillus stearothermophilus</i> S-WN 307.....	89
15- <i>Bacillus stearothermophilus</i> S-PS 2101.....	89
16- <i>Bacillus stearothermophilus</i> S-AS 2801 H.....	91

PART III

* Production of thermostable alkaline protease(s) by the thermo-alkalophilic <i>Bacillus stearothermophilus</i> S-WN1616 B isolated from wady El-Natroon lakes in Egypt.....	93
1- Relation of inocula sizes to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616B isolated from Wady El-Natroon lakes.....	93

	Page
2- Relation of different incubation periods to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	96
3- Relation of different incubation temperatures to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	96
4- Relation of pH value to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	101
5- Relation of different buffers to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	101
6- Relation of different concentrations of NaCl to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	106
7- Relation of different amino acids to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	106
8- Relation of different inorganic sources to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	111
9- Relation of elimination of one of the ingredients of the production medium to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	111
10- Relation of different protein sources to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	116
11- Relation of supplying certain vitamins at different concentrations (p.p.m.) without yeast extract to thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	116
12- Effect of introducing different concentrations of some heavy metals on thermo-alkaline protease(s) production by <i>Bacillus stearothermophilus</i> S-WN 1616 B.....	122

PART IV

* Purification and properties of thermo-stable alkaline protease(s) produced by thermophilic, proteolytic and alkalophilic <i>Bacillus stearothermophilus</i> S-WN 1616 B isolated from wady El-Natroon lakes.....	125
* Section (I): Purification of the thermo-alkaline protease(s).....	125
1- Preparation of cell-free filtrate.....	126
2- Ammonium sulfate precipitation.....	126

	Page
3- Dialysis against distilled water.....	127
4- Concentration by dialysis against sucrose.....	127
5- First purification on sephadex G-200 column chromatography.....	127
6- Second purification on sephadex G-100 gel filtration column chromatography.....	130
* Section II : Properties of the purified thermo-alkaline protease produced by <i>Bacillus stearothermophilus</i> S- WN 1616 B.....	136
1- Temperature.....	136
2- pH.....	136
3- Incubation time.....	141
4- Substrate (gelatin) concentration	141
5- Inhibitors and activators.....	141
6- Heat stability.....	148
7- Amino acid composition.....	148

PART V

* DISCUSSION	152
* ENGLISH SUMMARY	166
* REFERENCES	172
* ARABIC SUMMARY
