INTRODUCTION	1
MATERIALS AND METHODS	11
RESULTS	23
Phytochemical Studies	23
(A) Phytochemical screening of the major plant constituents	23
(B) Isolation and elucidation of structure of the pure chemical constituents	24
1. Compound (1)	24
2. Compound (2)	28
Cytological studies	34
I - Light microscopy	34
i. Mitotic investigations	34
A. Effects of plant extracts and chemicals on the MI	34
B. Effect on phase index (PI)	44
C. Effect on the percentage of total abnormalities	49
D. Effect on distribution of total abnormalities in the mitotic phases	57
E. Induction of different types of abnormalities	59
F. Distribution of the different types of abnormalities in each mitotic phase	65
G. Effect on the nucleoplasmic index (NP)	72
ii. Meiotic studies	77
A. Percentage of total abnormalities	77
B. The percentage of abnormalities of the <u>1st</u> and <u>2nd</u> divisions	80
C. Types of abnormalities	80
