Acknowledgement

Preface

### INTRODUCTION

Isolation of actinomycetes from natural habitats	1
Taxonomy of actinomycetes	3
Classical criteria of genera and species of actinomycetes :	4
Morphological criteria	4
Morphology of spores	5
Cultural properties	5
Colour of aerial mycelium	5
Colour of substrate mycelium and soluble pigments	6
Production of melanin pigments	8
Physiological tests	8
Utilization of different compounds as sole source of carbon	9
Utilization of different compounds as sole nitrogen source	9
Antibiotic activity	10
Sensitivity to antibiotics	11
Recent taxonomy of actinomycetes	11
Chemotaxonomy	12
Peptidoglycans of actinomycetes	12
DNA base composition	14
Lipids of actinomycetes	14
Numerical taxonomy	15
Recent systems of classification of actinomycetes	16
Generic identification of actinomycetes	18
Streptomycetes of Egyptian soils	18
Grey streptomycetes series	19

## MATERIALS AND METHODS

Media	21
Biological characteristics	26
Physiological characteristics	27
Enzymatic activities	29
Degradative activities of some complex insoluble compounds	30
Antimicrobial characteristics	31
Sensitivity to some antibiotics	32
Chemotaxonomical characteristics	33

## EXPERIMENTAL RESULTS

Generic identification of experimented actinomycete isolates	39
Differentiation of the experimented isolates into sections	

## VIOLET SECTION

### Group One

Morphological characteristics	44
Cultural characteristics	44
Growth characteristics	50
Antimicrobial potentialities	55
Sensitivity to some antibiotics	55
Some enzymatic potentialities	55
Taxonomic identification of isolates of group one	60

## **Group Two**

Morphological characteristics	60
Cultural characteristics	62
Growth characteristics	66
Antimicrobial potentialities	69
Sensitivity to some antibiotics	69
Some enzymatic potentialities	74
Taxonomic identification of isolates of group two	74

## **Group Three**

Morphological characteristics	77
Cultural characteristics	77
Growth characteristics	82
Antimicrobial potentialities	84
Sensitivity to some antibiotics	84
Some enzymatic potentialities	89
Taxonomic identification of isolates of group three	89

Comparative study of the fatty acid composition of the cell wall of the groups of the violet section	92
---	----

## **BLUE SECTION**

### **Group One**

<b>Subgroup a</b>	95
Morphological characteristics	95
Cultural characteristics	95
Growth characteristics	99
Antimicrobial potentialities	101
Sensitivity to some antibiotics	103
Some enzymatic potentialities	108
Taxonomic identification of isolates of group one	108

### **Subgroup b**

Morphological characteristics	111
Cultural characteristics	111
Growth characteristics	116
Antimicrobial potentialities	118
