

INTRODUCTION

INTRODUCTION

This work deals with the subject of paralytic foot.

First it begins with the anatomy, biomechanics, pathology and causes of paralytic foot. Then comes the management of paralytic foot which include the clinical diagnosis, Radiological diagnosis and treatment.

In clinical diagnosis I comment on most common foot deformities according to its cause.

In radiological diagnosis I comment on bony arrangement of the paralytic foot in various types of foot deformities.

In treatment I comment on basic principles of management of paralytic foot with specific management for each type of deformity according to its cause.
