

٢- نتائج الفرض الثاني :

* توجد فروق دالة إحصائياً عند مستوى ٠,٠١ بين متوسط درجات أمّهات الجانحين وأمّهات غير الجانحين لصالح أمّهات غير الجانحين في السمات الآتية :

(التآلف - الثبات الانفعالي - الحماس - الامتثال - المغامرة - التخيل - الحنكة - كفاية الذات - التنظيم الذاتي - الشعور بالذنب) .

- كما وجد فرقاً دالاً إحصائياً عند مستوى ٠,٠٥ لصالح أمّهات غير الجانحين في سمة (الذكاء) .

* توجد فروق دالة إحصائياً عند مستوى ٠,٠١ بين متوسط درجات أمّهات الجانحين وأمّهات غير الجانحين لصالح أمّهات الجانحين في السمات الآتية :

(السيطرة - الحساسية - الارتياح - عدم الأمان - الراديكالية - التوتر - توهم المرض - الاكتئاب الانتحاري - التهيج - القلق الاكتنابي - الاكتئاب منخفض الطاقة - الملل والانسحاب - البارانونيا - الانحراف السيكوباتي - الوهن النفسي - نقص الكفاية النفسية)

كما وجد فرقاً دالاً إحصائياً عند مستوى ٠,٠٥ لصالح أمّهات الجانحين في سمة (الفصام) .

٣- نتائج الفرض الثالث :

لا توجد فروق دالة إحصائياً بين متوسط درجات آباء وأمّهات الجانحين في سمات الشخصية التي تهتم الدراسة بقياسها .

٤- نتائج الفرض الرابع :

لا توجد فروق دالة إحصائياً بين متوسط درجات آباء وأمّهات غير الجانحين في سمات الشخصية التي تهتم الدراسة بقياسها .

Introduction :

Family plays important roles to its members , especially its childrens. The more the socity has strong relation among its members in general or between famliy members in particular, the more strong and progressive the society will be. It is of course true since the lack of closeness in such relations will in contrast lead to the dissociation of this society . Scientific progress have many increasing and inflaming negative effects on family members , such as voilence, crimes, family conflicts and delinquency. For example delinquency is one of the dangours psychological and social diseases because the delinquent becomes a problematic child for society to the degree that he threatens elements and main sources of welfare in society , therefore a lot of researchers have studied personality traits of delinquents and the factors which have led to delinquency .

Psychologists state that the normal child is growing up in normal family conditions, while the a bnormal child grows up in a bnormal family that leads to delinquency. To add more psychologists have agreed that there isn't problematic child but there are problematic fathers and mothers .

In general the motives behind delinquency are feelings of hatred, jealousy and psychological disorders which are due to a bnormal socialization or a bnormal traits in personality of their parents .

Question of study :

This research was conducted to answer the following questions :

- 1- Are there any significant differences between delinquents and non delinquents' fathers in personality traits ?
- 2- Are there any significant differences between delinquents and non delinquents' mothers in personality traits ?
- 3- Are there any significant differences between delinquents' parents in personality traits ?
- 4- Are there any significant differences between non delinquents' parents in personality traits ?

paranoia, psychopathic deviation, schizophrenia, psychosthenia and psychological- inadequacy).

- 2- There are significant differences at 0.01 level between delinquents and non – delinquents' mothers towards non – delinquents mothers in these traits of personality :
 - (warmth, emotional stability, implusivity, conformity, boldness, imagination, shrewdness, self – sufficiency, self – discipline, Guilt & resentment) .
 - and There is significant difference at 0.05 level between delinquents and non – delinquents' mothers towards non – delinquents' mothers in (intelligence) .
 - There are significant differences at 0.01 level between delinquents and non delinquents' mothers towards delinquents' mothers in these traits of personality:
(dominance, sensitivity, suspiciousness, insecurity, radicalism, tension , hypochondriasis, suicidal depression, agitation, anxious – depression, low energy depression , Boredom & withdrawal, paranoia, psychopathic deviation, psychological inadequacy) .
 - and There is significant difference at 0.05 level between delinquents and non delinquents' mothers towards delinquents' mothers in (schizophrenia) .
- 3- There aren't any significant differences between delinquents' parents in traits of personality .
- 4- There aren't any significant differences between non - delinquents' parents in traits of personality .
