Abstract

Chapter (I): Introduction **1**

Chapter (II): Steady flow about a rotating sphere in a viscoelastic fluid **11**

2.1 Formulation of the problem **11**

2.1.1 Constitutive equation **12**

2.1.2 The Continuity and momentum equations **13**

2.1.3 The boundary conditions **19**

2.2 Method of solution **20**

2.2.1 Zero-order approximation **21**

2.2.2 First-order approximation **22**

2.2.3 Second-order approximation **22**

2.2.4 Third-order approximation **23**

2.3 Solutions of the successive set of equations **23**

2.3.1 Zero-order approximation **23**

2.3.2 First-order approximation **24**

2.3.3 Second-order approximation **26**

2.3.4 Third-order approximation **29**

Chapter (III): Steady flow about a rotating and translating sphere in a viscoelastic fluid **34**

3.1 Formulation of the problem **34**

3.2 The boundary conditions **35**

3.3 Solutions of the successive set of equations **35**

3.3.1 Zero-order approximation **35**

3.3.2 First-order approximation **36**

3.3.3 Second-order approximation **39**

Chapter (IV): Flow analysis	43
I-Rotational flow	44
4.1 Zero-order approximation	44
4.2 First-order approximation	46
4.3 Second-order approximation	47
4.4 Third-order approximation	52
4.5 The streamlines due to the whole flow	56
4.6 Determination of the torque acting on the rotating sphere	59
II- Combined rotational and translational flows	62
4.7 Zero-order approximation	62
4.8 First-order approximation	64
4.9 Second-order approximation	67
4.10 Determination of the torque acting on the rotating sphere	73
4.11 The drag on the sphere	75
Chapter (V): Results	79
References	87
