- Figures	1
- Tables	3
- Introduction	4
- Chapter I: Physiology of the Newborn.	9
▪ Physiology of the cardiovascular system	22
▪ Respiratory system	24
▪ Central nervous system	25
▪ Renal system	26
▪ The liver	27
▪ The gastrointestinal system	28
▪ Body fluid homeostasis	33
▪ Thermal regulation in neonate	34
▪ Neonatal metabolic requirements	34
- Chapter II: Pediatric pharmacology.	38
▪ Pharmacokinetics.	42
▪ Inhalation anesthetics.	44
▪ Intravenous anesthetics.	46
▪ Skeletal muscle relaxants.	52
▪ Analgesic drugs.	52
- Chapter III: Anesthetic management of the newborn	59
▪ Preanesthetic assessment.	60
▪ Premedication.	61
▪ Induction of anesthesia.	66
▪ Management of airway.	67
▪ Positioning.	68
▪ Maintenance of anesthesia.	69
▪ Ventilation.	70
▪ Intraoperative fluid therapy.	71
▪ Replacement of blood loss.	77
▪ Monitoring in the operating room.	77
- Chapter IV: Neonatal surgical emergencies.	83
I- Airway anomalies.	83
II- Thoracic lesions.	88
a. Tracheoesophageal fistula and esophageal atresia	98
b. Congenital diaphragmatic hernia.	100
c. Congenital lobar emphysema.	105
d. Congenital heart diseases.	105
III- Abdominal lesions.	109
a. Abdominal wall defects (omphalocele and gastroschisis)	109
b. Intestinal obstruction.	109

c. Biliary atresia.	112
d. Pyloric stenosis.	115
e. Necrotizing enterocolitis	118
IV- Neurosurgical lesions.	120
a. Meningomyelocele.	120
b. Hydrocephalus.	122
c. Sudden infant death syndrome.	124
d. Kernicterus.	124
e. Hypoglycemia.	125
f. Hypocalcemia.	126
g. Craniosynostosis.	126
- Chapter V: Complications	129
▪ Respiratory distress syndrome	129
▪ Bronchopulmonary dysplasia	131
▪ Intracranial hemorrhage	132
▪ Retinopathy of permeability	133
▪ Apnea spells	135
▪ Sepses	136
- Summary	137
