INTRODUCTION	
* Some uses of chicken feather	1
* Chemical composition of chicken feather	2
* Nutrative value of chicken feather	2
* Processing methods of chicken feather	3
* Microbial degradation of wastes	4
* Biodegradation of wastes	5
* Thermophilic micro-organisms and degradation of wastes	6
* Thermophilic actinomycetes	7
* Enzymes of thermophilic actinomycetes	8
* Keratinolytic thermophilic actinomycetes	8
* Isolation of thermophilic actinomycetes	9
* Enrichment of soil in thermophilic microorganisms	10
* Thermal enrichment of soil as a preferential method for the isolation of specific thermophilic actinomycetes	10
* Plating technique for the isolation of thermophilic actinomycetes	12
* Taxonomical identification of thermophilic actinomycetes	12

	Page.
MATERIALS AND METHODS	
1- Soil samples	14
2- Thermal enrichment of soil in thermophilic chicken feather lysing actinomycetes	14
3- Media	14
4- Identification of the obtained thermophilic chicken feather lysing actinomycetes.....	16
a- Experimented isolates	16
b- Cultural properties of isolates	17
c- Morphological properties of isolates	17
d- Micro-morphology of spores of isolates	18
5- Fermentation technique	18
6- Determination of products of chicken feather hydrolysis soluble in broth	18
a- Protein content of broth	18
b- Total amino acids contents of broth	20
c- Ammonia content of broth	20
7- Estimation of keratinases in broth	20
8- Effect of different nutritional sources of chicken feather hydrolysis by the experimented actinomycetes.....	20
a- Effect of different nitrogen sources	20
b- Effect of different phosphorus sources	20
c- Effect of different microelements	24

EXPERIMENTAL RESULTS

CHAPTER (1)

* Isolation, biological characterization, taxonomic identification and time course hydrolysis of thermophilic chicken feather lysing actinomycetes.	
* Isolation of thermophilic chicken feather lysing actinomycetes. .	25
* Biological characteristics of isolates of the white group.	26
a- Cultural characteristics	26
b- Morphological characteristics of isolates of the white group.	28
c- Production of melanin pigments	29
d- Temperature relationship.	29
* Taxonomic identification of isolates of the white group	29

CHAPTER (2)

* Time course hydrolysis of chicken feather by <u>Thermoactinomyces keratinolyticus</u>	33
a- Production of soluble proteins	33
b- Production of amino acids	36
c- Production of ammonia	37
d- Production of keto acids	38
e- Production of total nitrogenous products.	39
f- Production of keratinolytic enzymes	39

CHAPTER (3)

* Time course hydrolysis of chicken feather by <u>Thermoactinomyces</u> <u>keratinolyticus</u> as affected by different nitrogen sources.....	41
a- Production of soluble proteins	42
b- production of free amino acids.....	48
c- Production of ammonia	54
d- Production of keto acids	58
e- Production of chicken feather hydrolysing enzymes	61
f- Production of total nitrogenous products	65

CHAPTER (4)

* Time course hydrolysis of chicken feather by <u>Thermoactinomyces</u> <u>keratinolyticus</u> as affected by different phosphorus sources ...	69
a- Production of soluble proteins	69
b- Production of amino acids	73
c- Production of ammonia	76
d- Production of keto acids	79
e- Production of chicken feather hydrolysing enzymes.....	82
f- Production of total nitrogenous products.....	85

CHAPTER (5)

* Time course hydrolysis of chicken feather by <u>Thermoactinomyces</u> <u>keratinolyticus</u> as affected by different microelements.....	89
a- Production of soluble proteins	89
b- Production of amino acids	96
c- Production of ammonia	101
d- Production of keto acids	105
e- Production of chicken feather hydrolysing enzymes	108
f- Production of total nitrogenous products.....	112
