|------------------------------------------------------------------------------------------------------------|-----------|
| <b>1-AKNOWLEDGMENTS .....</b>                                                                              | <b>I</b>  |
| <b>2-ABSTRACT .....</b>                                                                                    | <b>II</b> |
| <b>3-CHAPTER (I):INTRODUCTION :</b>                                                                        |           |
| 1.1. General statement .....                                                                               | 1         |
| 1.2. Location and accessibility .....                                                                      | 1         |
| 1.3. Topography and drainage patterns.....                                                                 | 2         |
| 1.4. Synopsis on the neoproterozoic Pan- African basement rocks                                            | 6         |
| 1.5. Mapping and classifications of the Egyptian basement .....                                            | 15        |
| 1.6. Previous work .....                                                                                   | 18        |
| 1.7. Aim of study .....                                                                                    | 22        |
| <b>4-CHAPTER (II) : GEOLOGIC SET UP :</b>                                                                  |           |
| 2.1. Rock varieties and field relations .....                                                              | 24        |
| <b>5-CHAPTER (III) : PETROGRAPHY :</b>                                                                     |           |
| 3.1. Gneissose syn-tectonic granites .....                                                                 | 30        |
| 3.2. Ophiolitic assemblage .....                                                                           | 31        |
| 3.3. Arc- volcanic assemblage .....                                                                        | 34        |
| 3.4. Syn- tectonic granites .....                                                                          | 37        |
| 3.5. Younger gabbros .....                                                                                 | 38        |
| 3.6. Post-tectonic granites .....                                                                          | 38        |
| <b>6-CHAPTER (IV) : STRUCTURE :</b>                                                                        |           |
| 4.1. Ductile structural elements .....                                                                     | 39        |
| 4.2. Fold-thrust relationship and kinematics .....                                                         | 43        |
| 4.3. Thrust-sense indicators and tectonic transport: An evidence of<br>frontal and oblique thrusting ..... | 49        |
| 4.4. Strike slip faults .....                                                                              | 52        |

| Topic                                                   | Page no. |
|---------------------------------------------------------|----------|
| <b>7-CHAPTER (V): TECTONIC EVOLUTION AND MODELING :</b> |          |
| 5.1.Tectonic evolution .....                            | 54       |
| 5.2. Physical modeling .....                            | 57       |
| <b>8-CHAPTER (VI): SUMMARY AND CONCLUSIONS .....</b>    | 67       |
| <b>9-REFERENCES .....</b>                               | 70       |
| <b>10-ARABIC SUMMARY.</b>                               |          |
