

	<b>Contents</b>	<b>Page</b>
	<b>Chapter I</b>	<b>1</b>
	<b>Introduction</b>	
1.1	Definition of corrosion	1
1.2	Cost of corrosion	1
1.3	Classification of corrosion	2
1.3.1	Various forms of corrosion	3
1.3.1.1	General corrosion or uniform attack	3
1.3.1.2	Pitting or localized attack	3
1.3.1.3	Galvanic corrosion	4
1.3.1.4	Crevice corrosion	4
1.3.1.5	Stress corrosion	4
1.3.1.6	Erosion – corrosion	4
1.3.1.7	Fretting corrosion	5
1.3.1.8	Filiform corrosion	5
1.4	Electrochemical theory of corrosion	5
1.4.1	Polarization	7
1.4.1.1	Concentration polarization	7
1.4.1.2	Activation polarization	8
1.4.1.3	Resistance polarization	9
1.5	Cu-zn binary phase diagram	9
1.6	Physical and mechanical properties of copper and brasses	10
1.7	Applications of copper and copper alloys	10
1.8	Corrosion of copper and copper alloys	11
1.9	Copper and high copper alloys	12
1.9.1	Brasses	12
1.9.2	Tin brasses	12
1.9.3	Aluminum brasse	13
1.9.4	Phosphor bronzes	13
1.9.5	Copper-nickel	14
1.9.6	Copper-silicon alloys	14
1.10	Corrosion prevention of copper and its alloys	14
1.10.1	Addition of alloying elements	17
1.10.2	Coating on copper alloys	18
1.10.3	Applications of inhibitors	18
1.10.4	Mechanism of inhibition	18
1.10.4.1	Formation of a physical barrier and reduction in metal reactivity	19
1.10.4.2	Change in the electrical double layer structure	19

---

1.11	Classifications of inhibitors	20
1.12	Latest approach on the study of inhibitors	21
1.12.1	Barrier layer formers	21
1.12.2	Neutralizers	22
1.12.3	Scavengers	22
1.12.4	Miscellaneous	22
1.13	Theories of corrosion inhibition	22
1.13.1	Adsorption theory	22
1.13.2	Electrosorption	23
1.13.3	$\pi$ -orbital adsorption	23
1.13.4	Vander waals adsorption	23
1.13.5	Film theory	24
1.14	Adsorption isotherms	24
1.15	Techniques for studying corrosion	26
1.15.1	Non-electrochemical methods	26
1.15.1.1	Coupon method	26
1.15.1.2	Solution analysis	26
1.15.1.3	Gas-volumetric method	26
1.15.2	Electrochemical methods	26
1.15.2.1	Electrical resistance method	26
1.15.2.2	Tafel extrapolation method	27
1.15.2.3	Polarization resistance method	27
1.15.2.4	Coulostatic method	28
1.15.2.5	A.c. impedance measurements	28
1.15.2.6	Faradaic rectification method	30
1.15.2.7	Faradaic distortion method	30
1.16	Corrosion prevention of copper and its alloys using organic compounds as inhibitors	31
	Aim of the present work	54
	<b>Chapter II</b>	<b>55</b>
	<b>Experimental</b>	
2.1	Composition of material samples	55
2.2	Test specimens and treatment	55
2.2.1	Weight loss measurements	55
2.2.2	Electrochemical measurements	56
2.3	Materials and solutions	56
2.3.1	Hydrochloric acid	56

---

2.3.2 Organic additives	57
2.4 Procedures used for corrosion measurements	59
2.4.1 Weight-loss measurements	59
2.4.2 Galvanostatic polarization studies	60
2.5 Determination of inhibition efficiency	61
Calculation of corrosion current (Tafel line extrapolation)	61
2.6 Calculation of the degree of surface coverage	62
2.6.1 Using polarization method	62
2.6.2 Using weight loss method	63
<b>Chapter III</b>	66
<b>Results</b>	
3.1 Weight loss measurements	66
3.2 Galvanostatic polarization measurements	92
3.3 Effect of temperature	141
<b>Chapter IV</b>	152
<b>Discussion</b>	
4.1 Corrosion of copper in acidic solutions	152
4.2 Corrosion of copper alloys in acidic solutions	153
4.3 Mechanism of dezincification	155
4.4 The evaluation of the effectiveness of benzyldeneaniline derivatives as inhibitors for the corrosion of copper and its alloys in 0.5M HCl by different corrosion monitoring techniques	158
4.4.1 Self corrosion of copper and its alloys in HCl	158
4.4.2 Evaluation of inhibition efficiency by weight loss methods	159
4.4.3 Galvanostatic polarization studies	161
4.4.3.1 Corrosion potential ( $E_{\text{corr.}}$ )	161
4.4.3.2 Corrosion current ( $i_{\text{corr.}}$ )	161
4.4.3.3 Tafel slopes ( $\beta_c$ & $\beta_a$ )	162
4.4.4 Applications of adsorption isotherms	162
4.4.5 Chemical structure and corrosion inhibition of copper and its alloys	164
<b>Chapter V</b>	
<b>Summary</b>	167
<b>References</b>	171
<b>Arabic Summary</b>	185
