Aim of the work	
Summary	i-v
1. INTRODUCTION	1
1.1 The Properties of paper pulps	1
1.2 Chemical constitution of pulps	3
1.3 Physical and sub-microscopic structure of cellulose	5
1.4 Reactivity of cellulose pulps	5
1.5 Additives of paper	6
1.6 Safety papers	19
1.7 Aging of paper	22
1.8 Writing inks	27
1.9 Examination of writing inks	34
1.10 Aging of inks	37
1.11 The relation between the structure of paper and ink penetration	43
1.12 Chemical erasure of handwriting	46
2. EXPERIMENTAL	56
2.1 Materials	56
2.2 Methods	57
2.2.1 Analysis of paper sheets	57
2.2.2 Determination of the relative aging of ink	59
2.2.3 Chemical erasure	60
2.2.4 Determination of the time required to disappearance or change the color of ink	61
2.2.5 FTIR Spectrophotometric study	61
2.2.6 Elemental analysis	61
2.2.7 Scanning electron microscope	61
2.2.8 Gloss determination	61
2.2.9 Measurements of conductivity	61

3. RESULTS AND DISCUSSION	62
3.1 Aging of the inks on paper	62
3.2 Effect of chemical erasure on aged inks written on the papers	67
3.2.1 Effect of acidic solution of sodium hypochlorite erasure on the accelerated aged iron blue aqueous ink	67
3.2.2 Effect of acidic solution of sodium hypochlorite erasure on the accelerated aged blue ballpoint ink	69
3.2.3 Effect of benzyl alcohol erasure followed by ethanol on the accelerated aged iron blue aqueous ink	74
3.2.4 Effect of benzyl alcohol erasure followed by ethanol on the accelerated aged blue ballpoint ink	74
3.3 The degree of goodness of completely erasure aged inks on the different types of papers	78
3.4 A view to identify chemical erasure trails on suspect documents	80
Conclusion & Recommendations	83
References	85
Arabic Summary	1-4
