

CONTENTS

	Page
Chapter I Introduction	
Introduction	1
Contrast of solution and solid-state complexes.....	3
Classification of Electron Donors, Acceptors and complexes.....	
• Literature survey on charge-transfer.....	9
Aim of the present Investigation.....	20
Chapter II Experimental	
Preparation of solid compounds:-	
a) Preparation of donors.....	22
b) The acceptors applied in the present study.....	24
c) Preparation of CT complexes.....	25
Studies of the solid complexes:-	
a) The electronic absorption spectra	26
b) Infrared absorption spectra.....	26
c) The ^1H -NMR spectra.....	27
d) Melting points.....	27
e) Elemental analysis.....	27
Studies in solution:-	
a) Solvents.....	31
b) Spectrophotometric measurements.....	31
c) Conductometric measurements.....	32

Chapter III Results and Discussion.

Studies of CT complexes in solution:-

A) The electronic absorption spectra of charge transfer complexes in halogenated organic solvents.....	33
B) Stoichiometry of the CT complex:-	
-) Determination of the stoichiometry of CT complexes spectrophotometrically.....	43
-) The Molar Ratio Methode.....	44
C) Determination of the stoichiometry of charge-transfer complexes in solution by conductometric titration.....	45
D) Equilibrium studies and Methods of calculation....	53
Studies of the solid CT complexes:-	
A) Infrared spectral studies of CT complexes.....	60
i) Complexes formed through electron transfer only.....	63
ii) Complexes formed through electron and proton transfer.....	75
B) ^1H -NMR spectra:-.....	79
i) Compounds formed through electron transfer.....	79
ii) Compounds formed through $\pi - \pi^*$ and proton transfer.....	84
C) Electronic absorption spectra of CT complexes.....	90
