Chapter (1)

Introduction and Literature survey

1.1	The glassy state.	1
1.2	The structure of glasses.	2
1.3	Glass formation.	4
1.4	Superionic Solids.	6
1.4.1	<i>What are Suporionic Conductors.</i>	6
1.4.2	<i>Sublattice Disordering.</i>	7
1.5	Electrical conduction in solids.	9
1.6	Structural Models.	10
1.6.1	<i>Cluster Model.</i>	10
1.6.2	<i>Cluster - bypass Model.</i>	10
1.6.3	<i>Structural models for $Ag_x-Ag_2ch-P_2ch_5$, ($x=I, Br, Cl$; $ch=O, Se$) glasses.</i>	10
1.6.4	<i>The dispersed Solute Model.</i>	11
1.6.5	<i>Jump Diffusion Models and Frequency Dependent Conductivity.</i>	11
1.7	Complex impedance method.	14
1.8	Dielectric properties and relaxation.	18
1.9	The effect of frequency and temperature on the dielectric loss.	21
1.10	Blocking electrode.	22
1.11	Theory and technique of Mossbauer effect.	24
1.11.1	<i>The hyperfine interactions.</i>	25
1.12	Metal-Semiconductor Devices.	27
1.12.1	<i>Schotty Effect.</i>	27
1.12.2	<i>Energy band relation at metal – semiconductor contact.</i>	29
1.12.2.1	<i>Ideal condition and surface states.</i>	29
1.12.2.2	<i>Depletion Layer.</i>	30
1.12.2.3	<i>General expression for the barrier hieght.</i>	32
1.12.3	<i>Thermionic Emission Theory.</i>	35
1.12.4	<i>Current-Voltage Measurement.</i>	37

1.13	Introduction to Solid state batteries.	39
1.13.1	Advantages of solid state battery technology.	40
1.13.2	Application of solid state ionics to batteries.	41
1.13.2.1	<i>High-temperature cells.</i>	41
1.13.3	Solid State Primary Lithium Batteries.	42
1.13.3.1	<i>Lithium - Iodine Cells.</i>	43
1.13.4	Solid State Secondary Lithium Batteries.	43
1.13.5	Secondary Insertion Cathode Lithium Batteries.	43
1.13.6	Silver Batteries.	44
1.13.6.1	<i>Silver Cells.</i>	45
1.13.7	Microbatteries.	46
1.13.7.1	<i>Silver and Copper Microbatteries.</i>	46
* Literature Survey		48
* Aim of the work		66

Chapter (2)

Experimental work

2.1	Preparation of samples.	67
2.2	Characterization of the samples.	68
2.2.1	<i>X- ray diffraction patterns.</i>	68
2.2.2	<i>Differential thermal analysis (DTA) .</i>	68
2.2.3	<i>IR Spectra .</i>	69
2.3	A.C. Measurements.	70
2.4	Mossbauer Spectrometer.	72
2.5	Density Measurement.	74
2.6	Molar Volume Calculations.	76

Chapter (3)

Results and discussion

3.1	Mossbauer effect results.	77
3.2	Density and Molar volume.	79
3.3	General discussion on the structure of glass.	80
3.4	Electrical characterization (conduction and dielectric properties).	82
3.4.1	The frequency dependence of the total conductivity.	82
3.4.2	The temperature dependence of the total conductivity (σ_{tot}).	87
3.4.3	Complex Impedence results.	89
3.4.4	Effect of frequency and temperature on the dielectric constant ϵ'	91
3.4.5	Effect of frequency and temperature on the dielectric loss ϵ''	93
3.4.6	Effect of frequency and temperature on the dielectric loss tangent ($\tan \delta$).	95
3.4.7	Temperature dependence of relaxation time, τ	97
3.4.8	Temperature dependence of diffusion coefficient, D	99
3.5	Effect of asymmetric electrodes on conduction and dielectric properties of superionic solid electrolyte powder.	102
3.6	I-V characteristic of the superionic solid electrolyte (SE).	106
3.7	<i>Superionic Solid electrolyte glass for chargeable battery application.</i>	109
3.7.1	Effect of thickness on the charging and discharging of solid electrolyte Ag/SE/Ag ₂ S battery.	109
3.7.2	Effect of pressure on the charging and discharging of solid electrolyte batteries.	111
3.7.3	Study of the charge-discharge processes by using different load resistances.	112
3.7.4	Effect of ambient temperature on the charge-discharge processes of the Ag/SE/Ag ₂ S battery.	113
3.7.5	Effect of annealing on the charging and discharging of solid electrolyte Ag/SE/Ag ₂ S battery.	115

3.7.6 Effect of solid electrolyte Ag/SE/Ag ₂ S battery storage on the charging and discharging process.	116
* Conclusions	117
* References	118
* Arabic abstract
