

# **CONTENTS**

|                                                                | <b>page</b> |
|----------------------------------------------------------------|-------------|
| • Aim of the work.....                                         | i           |
| • Summary .....                                                | I-IV        |
| • General introduction .....                                   | 1           |
| • Review of literature .....                                   | 3           |
| Natural occuring epoxy fatty acids : .....                     | 3           |
| Dihydroxy saturated acids .....                                | 5           |
| Synthetic surface active agents .....                          | 7           |
| Anionic detergents: .....                                      | 10          |
| (i) long chain fatty alcohol sulphonates .....                 | 10          |
| (ii) surfactants from natural oils .....                       | 13          |
| (iii) surfactants from fatty acids and esters .....            | 13          |
| Nonionic detergents : .....                                    | 15          |
| 1- Carboxylic acid ethoxylate surfactants .....                | 15          |
| 2- Condensate with long - chain fatty alcohols .....           | 18          |
| 3- Condensate with mercaptans.....                             | 20          |
| 4- Condensate of ethylene oxide with amines .....              | 20          |
| 5-Condensate of an ethylene oxide with amides . .....          | 22          |
| 6- Condensation products of ethylene and propylene oxides .... | 23          |
| 7- Alkylol amides .....                                        | 26          |
| 8- Fatty amine oxides .....                                    | 28          |
| 9- Sugar esters .....                                          | 29          |
| Utilization of propylene oxide .....                           | 31          |

|                                                                                                          | <b>page</b> |
|----------------------------------------------------------------------------------------------------------|-------------|
| Surface properties of nonionic surfactants : .....                                                       | 32          |
| a) Cloud point . .....                                                                                   | 32          |
| b) Surface and interfacial tension .....                                                                 | 33          |
| c) Wetting power . .....                                                                                 | 33          |
| d) Foaming power . .....                                                                                 | 36          |
| e) Emulsification power .....                                                                            | 37          |
| Biodegradability .....                                                                                   | 38          |
| Field of applications .....                                                                              | 41          |
| • Materials and methods: .....                                                                           | 45          |
| - Synthesis of epoxy fatty esters .....                                                                  | 46          |
| - Synthesis of nonionic surfactants .....                                                                | 53          |
| - Synthesis of sugar ester of 9(2) -hydroxy 10(3) -[ propyl<br>polypropenoxy ether ] octadecanoate ..... | 53          |
| - Synthesis of cis 9 , 10 dihydroxy octadecanoic acid . .....                                            | 54          |
| - Synthesis of 2 -hydroxy 3-[ propyl polypropenoxy ether ]<br>octadecan 1,2 diol .....                   | 54          |
| - Synthesis of 1,3 -dioxalane derivatives .....                                                          | 55          |
| - Surface active properties of nonionic surfactants .....                                                | 58          |

|                                                                                |       |
|--------------------------------------------------------------------------------|-------|
| • Discussion :                                                                 |       |
| I- Synthesis and evaluation of some nonionic surfactants .....                 | 64    |
| II- Synthesis evaluation of some sugar esters .....                            | 111   |
| III- Synthesis of some new surfactants pearing . 1,3 - dioxalane<br>ring ..... | 139   |
| IV- Surface properties and thermodynamic parameters . ....                     | 173   |
| • References .....                                                             | 196 ° |
| • Arabic Summary .....                                                         |       |
