Chapter I.	Introduction.....	1
I-1.	General Introduction.....	1
I-2.	Literature Survey.....	7
I-3.	Aim of Work.....	24
Chapter II.	Theoretical Review and Calculation Methods...	25
II-1.	Conduction Mechanism in Amorphous Solids...	25
II-1-a.	Band Conduction Mechanism.....	27
II-1-a-i.	Cohen, Fritzsche and Ovshinsky (CFO) Model..	27
II-1-a-ii.	Davis and Mott Model.....	29
II-1-a-iii.	Marshall and Owen Model.....	29
II-1-b.	Hopping Conduction.....	30
II-2.	AC-Conduction in Amorphous Solids.....	33
II-2-a.	Quantum Mechanical Tunneling (QMT) Model..	34
II-2-b.	Correlated Barrier Hopping (CBH) Model.....	35
II-3.	Dielectric Properties.....	36
II-3-a.	Sources of Polarizability.....	36
II-3-b.	Dielectric Behaviour of Polar Polymer.....	37
II-3-c.	Dielectric Relaxation in Solids Polymers.....	42
II-4.	Optical Properties of Amorphous Solids.....	45
II-5.	Optical Absorption Spectroscopy.....	49
II-5-a.	Beer Lambert Law.....	50
II-5-b.	Light Absorbing by Organic Dyes.....	51
II-5-c.	Quantum Efficiencies or Quantum Yield.....	54
II-5-c-i.	Factors Affecting Quantum Yield.....	56
II-6.	Fluorescence	56

	Page
II-6-a. Theory of Fluorescence.....	57
II-6-b. Factors Affecting Fluorescence.....	59
II-6-c. Factors Affecting Quenching of Fluorescence..	60
II-6-d. Fluorescence Quantum Yield.....	61
II-6-e. Stokes Shift.....	61
II-6-f. The Fluorescence Intensity.....	62
II-7. Fluorescent Solar Collectors (FSCs).....	63
II-7-a. Elementary Processes.....	63
II-7-b. Loss Factors in the Transport Properties of a LSC.....	67
II-8. Photoelectrochemical Solar Cells (PEC).....	72
II-8-a. Cell Description.....	73
II-8-b. Chemical and Electrochemical Reactions...	73
 Chapter III. Experimental.....	 77
III-1. Sample Preparation.....	77
III-1-a. Preparation of Pure Polymer.....	77
III-1-a-i. Molecular Weight Measurements.....	77
III-1-b. Polymer-dye Samples Preparation.....	77
III-1-c. Preparation of Titanium Dioxide.....	78
III-1-d. Preparation of Photoelectrochemical Solar Cells.....	78
III-2. Thermal Analysis.....	79
III-3. Infrared Spectra.....	79
III-4. Electrical Conductivity and Dielectric Measurements.....	79
III-5. Optical Absorption.....	82
III-6. Dye Photostability and Polymer Degradation..	83

		Page
III-6-a.	Indoor Testing.....	83
III-6-b.	Outdoor Testing.....	83
III-7.	Measurement of Light Intensity (I_0).....	83
III-8.	Fluorescence Measurements.....	85
III-9.	(I-V) Characteristic of Solar Cells under Illumination.....	85
Chapter IV.	Characterization of the Samples.....	93
IV-1.	Thermal Analysis.....	93
IV-2.	IR-Spectra.....	99
Chapter V.	Results and Discussion.....	111
	Part (A)	
	Electrical Conductivity.....	111
V-A-1.	DC-Electrical Conductivity.....	111
V-A-1-i.	Pure PMMA.....	111
V-A-1-ii.	PMMA-dye Samples.....	112
V-A-2.	AC-Electrical Conductivity.....	116
V-A-2-i.	Pure PMMA.....	117
V-A-2-ii.	PMMA-dye Samples.....	119
V-A-3.	The Frequency Effect on AC-Conductivity...	127
	Part (B)	
	Relative Permittivity and Dielectric Loss...	132
V-B-1.	Pure PMMA.....	132
V-B-2.	PMMA-dye Samples.....	134

		Page
	Part (C)	
	Optical Properties.....	152
V-C-1.	Indoor Testing.....	153
V-C-2.	Outdoor Testing.....	181
V-C-3.	Measurement of Photochemical Quantum Yield.....	187
V-C-4.	Fluorescence Measurements.....	205
	Part (D)	
	Photoelectrochemical Solar Cells Based on Dye Sensitized Titanium Dioxide.....	211
V-D-1.	(I-V) Characteristic under Illumination...	214
	Summary and Conclusions.....	222
	References.....	233
	Arabic Summary.....
