

TABLE OF CONTENTS

1. SUMMARY	i
2. AIM OF THE WORK.....	iii
3. INTRODUCTION	1
1. Importance of 4H-3,1-benzoxazin-4-ones.....	1
1.1 Pharmaceutical applications of 4H-3,1-benzoxazin-4-ones	1
1.2 Industrial applications	3
2. Synthesis of 4H-3,1-benzoxazin-4-ones	3
2.1 From anthranilic acids	3
2.1.1 Via the action of acid chlorides on anthranilic acid	3
2.1.2 Via the action of acid anhydrides on anthranilic acid	8
2.1.3 Via reaction of anthranilic acid with aromatic carboxylic acid	11
2.1.4 Reaction of substituted anthranilic acid with Boc-protected amino acids	12
2.1.5 Reaction of substituted anthranilic acid with 2,2-dihydro fluoroalkanoic acid	13
2.1.6 Synthesis of Bis(411)-3,1-benzoxazin-4-one derivatives :-	13
2.1.7 From interaction of anthranilic acid with heterocyclic compounds	14
2.1.7.1 From 4-arylidene-2-aryl-oxazolin-5-one	14
2.1.7.2 From iminodithiazole	14
2.1.7.3 From (4H)-3,2-benzoxazin-4-one	15
2.1.7.4 From 3- methyl-2-(ethoxycarbonylmethoxy) quinoxaline	15
2.1.7.5 From 2-ethoxycarbonyl-4(3H)-quinazolin-4-one	15
2.1.7.6 From substituted coumarin.....	16
2.1.7.7 From hetero-ring opening of furanone derivatives	17
2.1.7.8 From hetero-ring opening of 1,3-dioxin-4-one derivatives	17
2.2 From N-acylantranilic acid.....	17
2.2.1 Acetic anhydride as cyclizing agent.....	17
2.2.2 Thionyl chloride as cyclizing agent	18
2.2.3 Vilsmeier reagents as cyclizing agent.....	18
2.2.4 Cyanuric chloride as cyclizing agent.....	19
2.2.5 Dicyclohexylcarbodiimide as cyclizing agent.....	19
2.3 From 2-methyl-4H-3,1-benzoxazin-4-one	20
2.4 From isatoic anhydrides	21
2.4.1 Reaction of isatoic anhydride with acid anhydrides.....	21

2.4.2 Reaction of isatoic anhydride with acid chlorides.....	22
2.4.3 Reaction of isatoic anhydride with phosphoryl- stabilized anions.....	23
2.5 Oxidation of indoles	23
2.6 Miscellaneous.....	24
2.6.1 From β -(Triphenylphosphoranylidene)amino esters	24
2.6.2 From iminophosphorane.....	25
2.6.3 From N-benzenesulphonylanthranilic acid	25
2.6.4 From thioamide derivatives	25
2.6.5 From electrochemical trichloroacetylanilides.....	25
2.6.6 CO ₂ Incorporation reaction using arynes	26
2.6.7 From 2-(1H-1,2,3-benzotrizol-1-yl)phenylethanone	26
2.6.8 From heating of acetylanthranilic acid by microwave	27
2.6.9 Thermolysis of 2-(3-benzoylthioureido)-4,5-dimethoxy benzoic acid	28
2.6.10 Thermally induced cyclization of ketenimines	28
2.6.11 From o-iodoaniline	28
3. Reactions of 4H-3,1-benzoxazin-4-ones.....	30
3.1 Reactions with Hydrogen nucleophiles.....	30
3.2 Reactions with Oxygen nucleophiles.....	30
3.3 Reactions with nitrogen nucleophiles.....	31
3.3.1 Ammonolysis	32
3.3.2 Hydrazinolysis.....	33
3.3.2.1 Reactions with hydrazine hydrate.....	33
3.3.2.2 Reaction with hvdrazine hydrate in presence of carbondisulphide	37
3.3.2.3 Reaction with subsituted hydrazines	38
3.3.2.4 Reactions with hydroxylamine hydrochloride	40
3.3.2.5 Reactions with thiosemicarbazide and aminoguanidines.....	40
3.3.3 Aminolysis	41
3.3.3.1 Reactions with primary nonaromatic amines	41
3.3.3.2 Reactions with secondary amines.....	43
3.3.3.3 Reactions with alkylamines	44
3.3.3.3.1 Reactions with benzylamine	44
3.3.3.3.2 Reactions with phenylethylamine	45
3.3.3.4 Reactions with anilines.....	48
3.3.3.4.1 Reactions with p-bromoanilines	49
3.3.3.4.2 Reactions with p-aminodiphenylamine	49

3.3.3.4.3 Reactions with o-toluidine	49
3.3.3.4.4 Reactions with 2-substituted and/or 2,6-disubstituted anilines	50
3.3.3.4.5 Reactions with anilines containing reactive function groups	51
3.3.3.4.5.1 Reaction with 2-cyanoanilines	51
3.3.3.4.5.2 Reactions with p-aminoacetophenone	52
3.3.3.4.5.3 Reactions with 4-hydroxyanilines	53
3.3.3.4.5.4 Reactions with sulphanilamide	53
3.3.3.5 Reactions with amino heterocyclic compounds	54
3.3.3.6 Reactions with diamines	56
3.3.3.6.1 Reactions with o-phenylenediamine	56
3.3.3.6.2 Reactions with ethylenediamine	58
3.3.3.6.3 Reactions with p-phenylenediamine	58
3.3.3.7 Reactions with aminoacids	59
3.3.3.8 Reactions with aminoalcohols	60
3.3.3.9 Reactions with Schiff's bases	61
3.3.3.10 Reactions with azines	61
3.3.3.11 Reactions with sodium azide	62
3.3.4 Reactions with carbon nucleophiles	62
3.3.4.1 Reactions with Grignard reagents	62
3.3.4.2 Friedel-Crafts reactions	67
3.3.4.3 Reactions with active methylene containing compounds	68
4. DISCUSSION	72
1. Synthesis and reactions of N-(2-(4-chlorophenyl)-1-(4-oxo-4H-benzo[d][1,3]oxazin-2-yl)vinyl)-2-(1,3-dioxoisindolin-2-yl)acetamide	72
1.1 The structure of compound (2) was established from the following:	72
1.2 Chemical proven of compound (2)	75
1.2.1 Reaction with amines	75
1.2.1 Hydrazinolysis	79
2. Base catalyzed of 3,1-(4H)-benzoxazinone (2) with active methylene compounds	80
3. Action of sodium azide	80
4. Friedel-Crafts reaction	81
5. Reaction with 2-amino methyl benzimidazole	83
6. Diels-Alder reaction	83

7. Synthesis of quinazolinyl urea	85
8. Synthesis of triazino quinazolinone derivative	85
9. Ammonolysis	88
9.1 Chemical proven of compound (14)	89
9.1.1 Acylation of (14)	89
9.1.2 Acetylation of quinazol-4-one (14)	90
9.1.3 Action of phosphorus pentachloride - phosphorus oxychloride on quinazol-4-one (14)	91
10. Mannish reaction	91
11. Synthesis of ethyl 2-(2-(2-(4-chlorophenyl)-1-(2-(1,3-dioxoisindolin-2-yl)acetamido)vinyl)quinazolin-4-yloxy)acetate	93
11.1 Chemical proven of compound (19)	94
12. Action of phenyl isocyanate on quinazolinone (20)	94
13. Action of p-chlorobenzaldehyde on quinazolinone (20)	95
14. Base catalysed reaction with hydroxylamine hydrochloride	95
14.1 Chemical proven of compound (23)	96
14.1.1 Acetylation of 3-N-hydroxy-4-quinazolone	96
14.1.2 Reaction with ethyl chloroacetate	97
14.1.2.1 Chemical proven of compound (25)	97
15. Action of phenyl isocyanate on quinazolinone (26)	98
16. Action of p-chlorobenzaldehyde on quinazolinone (26)	98
5. BIOLOGICAL ACTIVITY	100
6. BIOLOGICAL ACTIVITY	105
7. EXPERIMENTAL	110
1. Synthesis and reactions of N-(2-(4-chlorophenyl)-1-(4-oxo-4H-benzo[d][1,3]oxazin-2-yl)vinyl)-2-(1,3-dioxoisindolin-2-yl)acetamide (2)	110
2. Action of primary amines on (2): formation of (3 _{a-h})	110
3. Action of hydrazines on (2): Formation of (4 _{a,b})	110
4. Action of active methylene on benzoxazinone (2): Formation of 1,4-quinolinone (5)	110
5. Action of sodium azide on benzoxazinone (2): Formation of tetrazole (6)	111
6. Action of aromatic substrates on benzoxazinone (2) in presence of anhydrous AlCl ₃ : Formation of o-arylanilides (7 _{a,b})	111
7. 2-Amino methyl benzimidazole (8)	111
8. Action of (8) on benzoxazinone (2): Formation of 2-substituted- 3-methyl-[2'-benzimidazolyl]-(4H)- 3,1-quinazolin-4-one (9)	111
9. Diels-Alder reaction on (2):	111

10. Synthesis of quinazolinylurea (11)	111
11. Cyclization of quinazolinylurea(12)	112
12. Action of thiosemicarbazide on benzoxazone (2)	112
13. Action of ammonium acetate or formamide on (2):Formation of quinazolone (14)	112
14. Acylation of (14): Formation of (15).....	112
15. Action of acetic anhydride on (14): Formation of 3N-acetyl quinazolone (16)	112
16. Action of phosphorus pentachloride - phosphorus oxychloride on quinazol-4-one (14)	112
17. Mannish reaction on quinazolone (14): Formation of Mannish bases (18).....	112
18. Action of ethyl chloroacetate on quinazolinone (14)	113
19. Action of hydrazine hydrate on quinazolinone (19).....	113
20. Action of phenyl isocyanate on quinazolinone (20).....	113
21. Action of aldehyde on quinazolinone (20)	113
22. Action of hydroxylamine hydrochloride on benzoxazone (2) Formation of 3-hydroxy-4-quinazolone (23)	113
23. Action of acetic anhydride 3-hydroxy quinazolone (23) Formation of (24).....	113
24. Action of ethyl chloroacetate on 3-hydroxy-4-quinazolone (23).....	113
25. Action of hydrazine hydrate on quinazolinone (25).....	114
26. Action of phenyl isocyanate on quinazolinone (26)	114
27. Action of aldehyde on quinazolinone (26)	114
