

## LIST OF TABLES

| Table                                                                                                                                                                                     | Page |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 1 Design of experiment of infected <i>Oreochromis niloticus</i> with isolated pathogens.....                                                                                              | 49   |
| 2 Bacterial isolates from examined naturally infected <i>Tilapia</i> ( <i>Oreochromis niloticus</i> ) .....                                                                               | 55   |
| 3 Distribution of isolated strain in different organs and tissues naturally infected tilapia ( <i>O.niloticus</i> ) .....                                                                 | 56   |
| 4 Morphological, physiological and biochemical characters of <i>Ps.aeruginosa</i> isolated from naturally infected <i>Tilapia</i> ( <i>Oreochromis niloticus</i> ).....                   | 58   |
| 5 Identification of <i>Ps.aeruginosa</i> isolates by API20E system....                                                                                                                    | 61   |
| 6 Morphological, Physiological and biochemical characters of suspected <i>Ps.fluoresences</i> isolated from naturally infected <i>Tilapia</i> ( <i>Oreochromis niloticus</i> ).....       | 64   |
| 7 Identification of <i>Ps.fluoresences</i> isolates by API20E system....                                                                                                                  | 67   |
| 8 Morphological, Physiological and biochemical characters of suspected <i>Salmonella arizonae</i> isolated from naturally infected <i>Tilapia</i> ( <i>Oreochromis niloticus</i> ).....   | 70   |
| 9 Identification of <i>Salmonella arizonae</i> isolates by API20E system.....                                                                                                             | 73   |
| 10 Morphological, Physiological and biochemical characters of suspected <i>Citrobacter baraakii</i> isolated from naturally infected <i>Tilapia</i> ( <i>Oreochromis niloticus</i> )..... | 76   |
| 11 Identification of <i>Citrobacter baraakii</i> isolates by API20E system.....                                                                                                           | 79   |

---

|    |                                                                                                                                                                                        |     |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 12 | Experimental infection and mortality pattern among injected <i>O.niloticus</i> with isolated pathogens .....                                                                           | 81  |
| 13 | Effect of extracts obtained from <i>Origanum vulgare</i> on bacterial growth.....                                                                                                      | 82  |
| 14 | Effect of extracts obtained from <i>Zingiber officinale</i> on bacterial growth.....                                                                                                   | 85  |
| 15 | Results of drug sensitivity test of <i>Ps.aeruginosa</i> .....                                                                                                                         | 88  |
| 16 | Results of drug sensitivity test of <i>Ps.fluoresences</i> .....                                                                                                                       | 90  |
| 17 | Results of drug sensitivity test of <i>Salmonella arizonea</i> .                                                                                                                       | 92  |
| 18 | Results of drug sensitivity test of <i>Ctrobacter baraakii</i> .....                                                                                                                   | 93  |
| 19 | Infra red spectrum of the compound (A) separated from <i>Origanum vulgare</i> .....                                                                                                    | 96  |
| 20 | NMR spectrum of the compound (A) separated from <i>Origanum vulgare</i> .....                                                                                                          | 97  |
| 21 | Infra red spectrum of the compound (B) separated from <i>Zingiber officinale</i> .....                                                                                                 | 103 |
| 22 | NMR spectrum of the compound (B) separated from <i>Zingiber officinale</i> .....                                                                                                       | 103 |
| 23 | Comparison between the antibacterial spectrum of the antibacterial agents obtained from <i>Origanum vulgare</i> and <i>Zingiber officinale</i> and the antibiotic chloramphenicol..... | 109 |

## LIST OF FIGURES

|                                                                                                                     | Page |
|---------------------------------------------------------------------------------------------------------------------|------|
| Fig. (1): The mass spectrum of the purified antimicrobial substance separated from <i>Origanum vulgare</i> .....    | 98   |
| Fig. (2): The UV spectrum of the antimicrobial substance separated from <i>Origanum vulgare</i> .....               | 99   |
| Fig. (3): The IR spectrum of the antimicrobial substance separated from <i>Origanum vulgare</i> .....               | 100  |
| Fig. (4): The NMR spectrum of the antimicrobial substance separated from <i>Origanum vulgare</i> .....              | 101  |
| Fig. (5): The mass spectrum of the purified antimicrobial substance separated from <i>Zingiber officinale</i> ..... | 104  |
| Fig. (6): The UV spectrum of the antimicrobial substance separated from <i>Zingiber officinale</i> .....            | 105  |
| Fig. (7): The IR spectrum of the antimicrobial substance separated from <i>Zingiber officinale</i> .....            | 106  |
| Fig. (8): The NMR spectrum of the antimicrobial substance separated from <i>Zingiber officinale</i> .....           | 107  |
