1. INTRODUCTION	1
1.1. Introductory Remarks	1
i. Normal (ordinary) Portland cement (Types I)	2
ii. Modified Portland cement (Type II)	3
iii. High-early strength (rapid-hardening) Portland cement (Type III)	3
iv. Low-heat Portland cement (Type IV)	4
v. Sulphate Resisting Cement (Type V)	4
1.2. Mineral Admixtures	5
1.3 Silica fume	6
1.4. Organic Concrete Admixture	7
1.4.1. Organic retarders	8
1.4.2. Organic accelerators	10
1.4.3. Water reducers and superplasticizers	11
1.4.4. Main types of superplasticizers	13
1.4.4.1. Naphthalene formaldehyde sulfonate (NSF)	13
1.4.4.2. Melamine sulfonate formaldehyde (MSF)	14
1.4.4.3. Phenol formaldehyde sulfonates	15
1.4.4.4. Polycarboxylates, (homopolymer, copolymer and terpolymer)	16
2. LITERATURE SURVEY	18
Objective of the present work	32
3. MATERIALS AND METHODS	34
3.1. Starting Materials	34
3.2. Superplasticizers	35
3.2.1. Low formaldehyde content polymer, (MSF ₁)	35
3.2.2. High formaldehyde content polymer, (MSF ₂)	35
3.2.3. Low formaldehyde and sulfite content polymer, (MSF ₃)	36
3.2.4. Melamine formaldehyde sulfonate by four-step method, (MSF ₄)	37
3.2.5. Melamine-urea formaldehyde sulfonate condensate, (MUSF)	38
3.3. Analysis of the synthesized superplasticizers	39
3.3.1. Elementary analysis	40
3.3.2. FT-IR spectrophotometric analysis	40
3.4. Preparation of cement pastes	42
3.4.1. Preparation of dry mixes	42
3.4.2. Mixing	42
3.4.3. Moulding	42
3.4.4. Curing	43
3.5. Methods of Investigation	43
3.5.1. Water of consistency and setting times	43

3.5.2. Electrical conductivity measurements	44
3.5.3. Bulk density measurements (dp)	45
3.5.4. Compressive strength measurement	45
3.5.5. Stopping of hydration	45
3.5.6. Water contents of hardened cement pastes	46
3.5.7. Degree of hydration (α)	48
3.5.8. Gel/space ratio, (χ)	48
3.5.9. Rheological measurements	49
3.5.10. Differential thermal analysis (DTA)	50
4. RESULTS AND DISCUSSION	
4.1. Preparation of Melamine Sulfonate Formaldehyde (MSF) and Melamine Urea Sulfonate Formaldehyde (MUSF)	52
4.2. Confirmation of the prepared superplasticizers	58
4.3. Hydration Characteristics of the Cement	64
4.4. Water of consistency and setting time	67
4.5. Rheological measurements	78
4.6. Electrical conductivity	80
4.7. Compressive strength	93
4.8. Bulk density	102
4.9. Chemically-combined water contents (wn)	110
4.10. Differential thermal analysis	120
4.11. Gel/space ratio	126
SUMMARY AND CONCLUSIONS	136
