<i>Subject</i>	<i>page</i>
<b>Introduction</b>	1
<b>Aim of the work</b>	3
<b>Review of literature</b>	4
<b><i>Chapter 1: Nosocomial infections</i></b>	4
Background	4
Criteria for defining nosocomial infections	4
Pathophysiology	6
Frequency	7
Mortality and Morbidity	9
History	9
Causes	10
Laboratory studies	12
The impact of antibiotic resistance on nosocomial infections:	13
<b><i>Chapter 2: Antimicrobial-Drug Resistance</i></b>	15
Antimicrobial Classification and Mechanism of Action	15
Inhibition of cell wall synthesis	15
Inhibition of Nucleic Acid (DNA) Replication	16
Inhibition of Protein Synthesis	17
Inhibition of Folate Metabolism	17
Development and spread of mechanism of antimicrobial resistance	17
Biochemical Mechanism of Bacterial Antimicrobial Resistance	20
Destruction or inactivation of antimicrobial	22
Synthesis of a new metabolic pathway	22

Penicillin-Resistant Pneumococci	28
Vancomycin Resistance in Enterococci	35
<b>Chapter 3: Extended-spectrum <math>\beta</math>-lactama</b>	43
Introduction and History	43
Characterization of ESBLs	45
Functional and molecular grouping	45
Susceptibility and biochemical characteristics	46
Types of ESBLs	46
TEM	47
SHV	50
CTX-M	50
OXA	57
Other ESBLs	60
ESBL Detection methods	62
Clinical Microbiology Techniques	65
Molecular Ddetection Method	71
Medical Significance of Detection of ESBLs	74
Epidemiology	76
<b>Chapter 4: Inducible <math>\beta</math>-lactamases</b>	82
Material and methods	84
Results	96
Discussion	119
Summary	129
Master sheet	131
Reference	133
Arabic Summary	167
