<b>1. INTRODUCTION.....</b>	<b>1</b>
<b>2. REVIEW OF LITERATURE .....</b>	<b>2</b>
2.1. Definations .....	2
2.1.1. Cellulose .....	2
2.1.2. Cellulases .....	2
2.2. Structural unit of cellulose .....	2
2.3. The mechanism of the enzymatic hydrolysis of cellulose	3
2.4. The factors affecting the action of celluloytic enzymes...	7
2.4.1. Effect of carbon and nitrogen source .....	7
2.4.2. Effect of Incubation period .....	10
2.4.3. Effect of Temperature .....	11
2.4.4. Effect of pH .....	13
2.4.5. Effect of activators and inhibitors.....	15
2.5. Definations. ....	18
2.5.1. Compost.....	18
2.5.2.Composting.....	18
2.6. The benefits of using compost . Anonymous (1989). ....	18
2.7. Factors affecting the decomposition process .....	19
2.7.1. Appropriate microbial populations .....	19
2.7.2. Sufficient aeration. ....	22
2.7.3. Temperature .....	24
2.7.4. C/N ratio .....	25
2.8 Effect of compost on .....	27
2.8.1. Soil fertility.....	27
2.8.2. Yield and productivity.....	29
2.8.3. Oil production.....	35
<b>3. MATERIALS AND METHOD.....</b>	<b>38</b>
3.1. MATERIALS . ....	38
3.1.1. Location of the agricultural experiments .....	38
3.1.2. Organic materials . ....	38
3.1.2.1. Rice straw . ....	38

3.1.2.2. Garbage. ....	38
3.1.2.3. Organic manure. ....	38
3.1.3. Chemical accelerator of composts. ....	38
3.1.4. Inorganic fertilizers . ....	40
3.1.5. Inoculants. ....	40
3.1.5.1. Cellulolytic agents. ....	40
3.1.5.2. Biofertilizer agents ....	40
3.1.6. Cultivars. ....	40
3.1.7. Media used. ....	40
3.1.8. Reagents. ....	44
3.2. <b>METHOD.</b> ....	45
3.2.1. Isolation and purification of cellulolytic fungi and bacteria . ....	45
3.2.2. Selection of the most active cellulolytic isolates... ..	46
3.2.3. Estimation of Glucose. ....	46
3.2.4. Identification of the most active isolates. ....	47
3.2.4.1. Identification of the cellulolytic fungus isolate. ....	47
3.2.4.2. Identification of the cellulolytic bacterial isolate. ....	47
3.2.5. Trials for maximizing the cellulolytic activities of most active strains . ....	47
3.2.5.1. Effect of different cellulose sources (carbon source ) . ....	48
3.2.5.2. CMC concentration (as a sole carbon source). ..	48
3.2.5.3. Effect of incubation period . ....	48
3.2.5.4. Effect of incubation temperature. ....	48
3.2.5.5. Effect of pH on the medium. ....	48
3.2.5.6. Effect of Nitrogen source ....	49
3.2.5.7. Effect of metallic ions. (Micronutrients). ....	49
3.2.5.8. Effect of vitamins. ....	50
3.2.6. Preparation of crude enzymes from each cellulolytic strains . ....	50
3.2.7. Assay of cellulose activity (CMCase) ....	51
3.2.8. Assay of cellulolytic enzymes activity. ....	51

3.2.8.1. Fpase activity .....	51
3.2.8.2. CMCase activity . (Cx activity) .....	51
3.2.8.3. Exo- Cellobiohydrolase activity (C <sub>1</sub> ). .....	51
3.2.8.4. Cellobiose assay for beta glucosidase. ....	52
3.2.9. Estimation of Protein. ....	52
3.2.10. Isolation and selection of most active phosphate dissolving bacteria . ....	52
3.2.11. Method of composting the wastes on small scale. ....	53
3.2.12. Composting of the wastes on large scale .....	53
3.2.13. Chemical analysis of compost. ....	54
3.2.14. Microbiological analysis of compost samples. ...	54
3.2.15. Field experiment. ....	55
3.2.16. Parameters measured. ....	57
3.2.16.1. Plant parameters for each plant type. ....	57
3.2.16.2. Microbiological analysis . ....	57
3.2.17. Statistical analysis. ....	58
<b>4. RESULTS.....</b>	<b>59</b>
4.1. Isolation of the cellulolytic bacteria and fungi. ....	59
4.2. Assay of cellulase activity of cellulolytic bacterial and fungal isolates .....	59
4.3. Identification of the most active cellulolytic bacterial and fungal isolates .....	59
4.4. Effect of nutritional and environmental requirements on the cellulose activity. ....	59
4.4.1. Effect of different carbon source. ....	59
4.4.2. Effect of CMC concentrations. ....	59
4.4.3. Effect of incubation period. ....	64
4.4.4. Effect of incubation temperature. ....	64
4.4.5. Effect of pH. ....	64
4.4.6. Effect of different nitrogen sources. ....	64
4.4.7. Effect of trace elements. ....	74
4.4.8. Effect of vitamins. ....	74
4.4.9. Media and condition recommended for maximum enzyme activity. ....	74

4.5. Detection of cellulase (CMCase ) activity of the most active cellulolytic strains .....	79
4.6. Assay of different cellulases of the most active cellulolytic strains . ....	79
4.7. Selection of the most active phosphate dissolving bacteria ( PDB ) isolates.....	79
4.8. Composting of rice straw and garbage. ....	79
4.8.1. On small scale . ....	84
4.8.1.1 Chemical analysis. ....	84
4.8.1.1.2. Microbiological analysis.....	84
4.8.2. Composting of rice straw and garbage at Maryat station (on large scale). ....	87
4.8.2.1. Microbiological analysis.....	87
4.8.2.2. Chemical analysis .....	87
4.9.1. Microbial densites of sun flower . ....	90
4.9.1.1. Total microbial count .....	90
4.9.1.2. Phosphate dissolvers. ....	93
4.9.1.3. Azotobacters.....	93
4.9.1.4. Cellulose decomposers. ....	93
4.9.2. Plant characteristics of sun flower . ....	100
4.9.2.1. Plant height. ....	100
4.9.2.2.Shoot fresh weight. ....	103
4.9.2.3. Shoot dry weight. ....	103
4.9.2.4. Chlorophyll content. ....	108
4.9.2.5. Stalical analysis .....	108
4.9.2.6. Disc diameters and yield.....	112
4.9.2.7. Weight of 1000 seeds and oil % . ....	112
4.9.2.8. Statistical analysis .....	112
4.9.3. The microbiological characteristics of corn rhizosphere .....	118
4.9.3.1. Total microbial counts . ....	118
4.9.3.2. Phosphate dissolving bacteria ( PDB ). ....	118
4.9.3.3. Azotobacters .....	123
4.9.3.4. Cellulose decomposers count . ....	123
4.9.4. Plant Characterestics of corn. ....	128

4.9.4.1. Height of plant .	128
4.9.4.2. Shoot fresh weight.	128
4.9.4.3. Shoot dry weight .	133
4.9.4.4. Chlorophyll content.	133
4.9.4.5. Statistical analysis .	138
4.9.4.6. Weight of kernel and yield	138
4.9.4.7. Weight of 100 seeds and oil %.	142
4.9.4.8. Statistical analysis.....	142
<b>5. DISCUSSION AND GENERAL CONCLUSION.....</b>	<b>146</b>
<b>6. SUMMARY.....</b>	<b>151</b>
<b>7. REFERENCE .....</b>	<b>157</b>
<b>ARABIC SUMMARY.....</b>	

## ***LIST OF TABLES***

<b>No.</b>	<b>Title</b>	<b>Page</b>
1.	Soil physical and chemical analyses of investigated area Maryut soil.	39
2.	Isolation of the cellulolytic bacteria and fungi .	60
3.	Assay of cellulase activity ( EU ) of cellulolytic bacterial and fungal isolates	61
4.	Effect of different carbon source (substrates)on the cellulase activity of most active cellulolytic strains .	65
5.	Effect of CMC concentration on the cellulase activity of most active cellulolytic strains .	66
6.	Effect of incubation periods on the cellulose activity of most active cellulolytic strains .	66
7.	Effect of incubation temperature on the cellulase activity of most active cellulolytic strains .	69
8.	Effect of pH on the cellulase activity of most active cellulolytic strains .	69
9.	Effect of different nitrogen sources on the cellulase activity of most active cellulolytic strains .	72
10.	Effect of addition of different trace elements on the cellulase activity of most active cellulolytic strains .	75
11.	Effect of vitamins on the cellulase activity of most active cellulolytic strains .	76
12.	Media and condition recommended for the maximum production of cellulases activity .	78
13.	Detection of cellulase (CMC ase ) activity of the most active cellulolytic strains .	80
14.	Assay of different cellulases of the most active cellulolytic strains .	81
15.	Estimation of pH of the modified Bunt Rovera medium contained rock phosphorus and inoculated with phosphate dissolving bacteria ( PDB ) isolates.	82

16.	Estimation of soluble phosphorus produced in the media contained rock phosphate by different phosphate dissolving bacteria ( PDB ) isolates .	83
17.	Chemcial characteristics of composted garbage and rice straw during the composting process.	85
18.	Microbiological analysis of rice straw and garbage composts during the composting process (on small scale )	86
19.	Microbiological analysis of rice straw and garbage compost at different intervals ( at Maryut Station ) .	88
20.	Chemical analysis of rice straw and Garbage compost at different intervals during composting process (At Maryut station ).	89
21.	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the total microbial counts in the rhizosphere of sunflower plants.	91
22.	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on phosphate dissolving bacteia counts in the rhizosphere of sunflower plants.	94
23.	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on Azotobacters count in the rhizosphere of sunflower plants.	96
24.	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on cellulose decomposer counts in the rhizosphere of sunflower plants.	98
25.	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the height of sunflower plants	101
26.	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on shoot fresh weight of sunflower stem.	104
27	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the shoot dry weight of sunflower	106
28	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the chlorophyll	109

content of sunflower plants.

29	Statistical mean effects of stages, Organic matter , biofertilizer and N-supplementation (Treatments) on the length, fresh weight, dry weight and chlorophyll of Sunflower plant .	111
30	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the yield of sunflower plants.	113
31	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the weight of 1000 seed (gm) and oil content (%) of sunflower plants.	115
32	Statistical mean effects of organic matter , biofertilizer and N-supplementation ( Treatments ) on the diameter of discs , weight of seeds / feddan , weight of 1000 seeds and oil content of sun flower plant .	117
33	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on total microbial counts in the rhizosphere of corn plants.	119
34	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on phosphate dissolving bacteria counts in the rhizosphere of corn plants.	121
35	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on azotobacters count in the rhizosphere of corn plants.	124
36	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on cellulose decomposer counts in the rhizosphere of corn plants.	126
37	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the height of corn plants.	129
38	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the shoot fresh weight of corn.	131
39	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the shoot dry weight of corn.	134

40	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the chlorophyll content of corn plant .	136
41	Statistical mean effects of stages, Organic matter, biofertilizer and N-supplementation (Treatments) on the length, fresh weight, dry weight and chlorophyll of corn plant .	139
42	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the weight of Kernels and the yield of corn.	140
43	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on weight of 100 grains and oil content of corn plant.	143
44	Statistical mean effects of organic matter , biofertilizer and N-supplementation ( Treatments ) on the weight of kernels , grains /plant , grains /feddan , weight of 100 grains and oil percent of corn plant .	145

## ***LIST OF FIGURES***

<b>No.</b>	<b>Title</b>	<b>Page</b>
1	Identification of Bacterial isolates by the Biolog microlog.	62
2	Vegetative cells of <i>Stachybotrys sp.</i> (x 1000) .	63
3	Effect of different carbon source (substrates)on the cellulase activity of most active cellulolytic strains .	65
4	Effect of CMC concentration on the cellulase activity of most active cellulase strains .	67
5	Effect of incubation periods on the cellulase activity of the most active cellulolytic strains .	68
6	Effect of incubation temperature on the cellulase activity of most active cellulolytic strains.	70
7	Effect of pH on the cellulase activity of the most active cellulolytic strains.	71
8	Effect of different Nitrogen sources on the cellulase activity of most active cellulolytic strains .	73
9	Effect of addition of different trace elements on the cellulase activity of most active cellulolytic strains .	77
10	Effect of vitamins on the cellulase activity of most active cellulolytic strains .	77
11	Degradation zone of CMC by most active celluloytic strains.	80
12	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on total microbial counts in the rhizosphere of sunflower plants.	92
13	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on phosphate dissolving bacteria counts in the rhizosphere of sunflower plants.	95
14	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on Azotobacter counts in the rhizosphere of sunflower plants.	97

15	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on cellulose decomposer counts in the rhizosphere of sunflower plants.	99
16	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the height of sunflower plants.	102
17	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on shoot fresh weight of sunflower stem.	105
18	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the shoot dry weight of sunflower.	107
19	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the chlorophyll content of sunflower plants.	110
20	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the yield of sunflower plants.	114
21	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on the weight of 1000 seed (gm) and oil content (%) of sunflower plants.	116
22	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on total microbial counts in the rhizosphere of corn plants.	120
23	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on phosphate dissolving bacteria counts in the rhizosphere of corn plants.	122
24	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on Azotobacter counts in the rhizosphere of corn plants.	125
25	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on cellulose decomposer counts in the rhizosphere of corn plants.	127
26	Effect of different treatments (organic matter, N. supplementation and biofertilizer) on height of corn	130

plants
