

Contents

Chapter 1: Parallel Processing Concepts.....	1
1.1 Parallel Processing	1
1.2 Parallel Architectures.....	1
1.2.1 The Flynn Taxonomy	2
1.3 The Parallel Algorithms	9
1.3.1 Portioning Phase.....	10
1.3.2 Communication Phase	10
1.3.3 Agglomeration Phase	10
1.3.4 Mapping and Scheduling	10
1.4 The Task Scheduling Problem	11
1.4.1 The Problem Model.....	12
1.4.2 Optimal Task Scheduling Algorithms.....	13
1.5 Performance Criteria	17
1.5.1 Speedup	17
1.5.2 Efficiency	18
1.5.3 Normalized Schedule Length	18
1.6 Objective of the Thesis	18
1.7 Organization of the Thesis	19
1.8 Conclusion	19
Chapter 2: Task Scheduling Algorithms.....	20
2.1 Introduction.....	20
2.2 The DSAs Algorithms.....	21

2.2.1 Priority-Based Algorithms	21
2.2.2 Clustering-based Algorithms.....	23
2.3 The Greedy DSAs Algorithms.....	24
2.3.1 Bounded Number of Processors Scheduling Algorithms	24
2.3.2 Unlimited Number of Clusters Scheduling Algorithms	30
2.3.3 Task Duplication Based (TDB) Algorithms	35
2.4 Iterative DSAs Algorithms	37
2.4.1 Hill-Climbing Algorithm	38
2.4.2 The Simulated Annealing Algorithm	38
2.4.3 Genetic Algorithms	38
2.4.3.1 Genetic Operators.....	40
2.4.3.2 DSAs based on GAs	41
2.5 Conclusion	46
Chapter 3: A Proposal of Developed Critical Path Genetic Algorithm	47
3.1 Introduction.....	47
3.2 Critical Path Genetic Algorithm (CPGA).....	48
3.2.1 Genetic Formulation of CPGA	49
3.2.1.1 Initial Population	49
3.2.1.2 Fitness Function	49
3.2.1.3 Genetic Operators	50
3.3 The Main Basics of CPGA Algorithm.....	53
3.4 Performance Evolution.....	59
3.5 Conclusion	98
Chapter 4: Task Duplication Genetic Algorithm.....	99

4.1 Introduction.....	99
4.2 Formulation of TDGA Algorithm.....	100
4.2.1 Initial Population	100
4.2.2 Fitness Function	101
4.2.3 Genetic Operators.....	101
4.3 Performance Evaluation.....	102
4.4 Conclusion	120
Chapter 5: Conclusion and Future Work.....	121
References	123
Arabic Summary
