Abstract	iii
List of Figures	x
1 Mathematical Modelling and Simple Examples	1
1.1 Introduction to Mathematical Models	1
1.1.1 Mathematical Models	1
1.1.2 Modelling Process	2
1.1.3 Difficulties of the Mathematical Models	2
1.1.4 Testing a Model	3
1.1.5 Classification of the Mathematical Models	3
1.1.6 Deterministic vs Stochastic	4
1.1.7 Deterministic Model of Population Growth	4
1.1.8 Stochastic Model of Population Growth	7
1.2 Mathematical Modelling in Epidemiology	13
1.2.1 Introduction	13
1.2.2 General Epidemic Model	15
1.2.3 A Deterministic Model for the spread of the Hepatitis B Virus in Egypt [21].	20

1.3	Monte Carlo simulation	27
2	Stochastic Model and Monte-Carlo Simulation for the spread of the Hepatitis B Virus in Egypt	29
2.1	Introduction	29
2.2	The Model	31
2.3	Numerical Simulation	39
2.4	Monte-Carlo Simulation	45
2.4.1	Method of Solution	45
2.4.2	Results of Monte-Carlo Model	46
2.5	Comparison of Results of Stochastic Model and Monte-Carlo Model .	48
3	Deterministic Model of the spread of the Hepatitis C Virus in Egypt [22]	53
3.1	Introduction	53
3.1.1	Biological Background	54
3.1.2	Our Study	55
3.2	The Model	56
3.3	Mathematical Concepts and Theorems	57
3.4	Mathematical Analysis of the Model	58
3.4.1	Equilibrium Points	58
3.4.2	Basic Reproductive Number	59
3.4.3	The Stability Analysis of the Disease Equilibrium Points . . .	61
3.5	Numerical Simulation	68
3.5.1	Method of Solution	68
3.5.2	Results of The Numerical Solutions	68
3.5.3	Comparison of Numerical and Theoretical Results	71

4	Stochastic Model and Monte-Carlo Simulation of the spread of the Hepatitis C Virus in Egypt	75
4.1	Introduction	75
4.2	The Model	77
4.3	Numerical Simulation	84
4.4	Monte-Carlo Simulation	90
4.4.1	Method of Solution	90
4.4.2	Results of Monte-Carlo Model	91
4.5	Comparison of Results of Stochastic Model and Monte-Carlo Model .	94
5	Conclusions	98
	Bibliography	101
