

Contents

Chapter I : <u>Introduction.</u>	Page 1
Chapter II : The Collective and The Rotation Vibration Models.	
II.1: The varieties of the collective motion and its coordinates.	12
II.2: The structure of the collective nuclear Hamiltonian.	13
II.2.1: The nuclear quadrupole Hamiltonian of the surface motion.	13
II.2.2: The collective kinetic energy in terms of Euler angles and intrinsic variables.	15
II.2.3: The collective potential energy surface.	17
II.3: The Hamiltonian of the rotation - vibration model.	18
II.4.1: The solution of the rotation- vibration Hamiltonian.	27
II.4.2: Classification of the diagonalized states.	33
Chapter III: The Electromagnetic Transitions.	
III.1: The collective electric quadrupole tran- sitions.	37
III.2: The collective magnetic dipole transi- tions.	40
