EFFECT OF WATER POLLUTION ON GENETIC STRUCTURE OF A FRESH WATER FISH IN QALUOBIA GOVERNORATE

A Thesis

**Submitted for Award of the Degree of Doctor
Of Philosophy in Science**

By

Amani Abd El-Hamid Mahmoud
(M.Sc. in Zoology)

Supervised By

Prof. Dr. Sabry, S. El-Serafy

*Professor of Fish Biology,
Faculty of Science,
Benha University*

Prof. Dr. Mohammed, E. M. Zowail

*Professor of Cytogenetics,
Zoology Department, Faculty of Science,
Benha University*

Dr. Magda, M. El-Ezabi

*Assistant Professor of
Zoology Department, Faculty of Science,
Benha University*

Dr. Khalid, M. Sharaf El-Deen

*Lecturer of Zoology
Zoology Department, Faculty of Science,
Benha University*

2006

Acknowledgement

*Thank **ALLAH** by whom the progress and success of this work was possible.*

*I would like to express my sincere gratitude and appreciation to **Prof. Dr. Sabry S. El-Serafy**, Professor of Fish Biology, Faculty of Science, Benha University, for supervising the work, his careful guidance, continuous constructive criticism and valuable discussions during the course of this investigation and for the revision of the manuscript. I will always be indebted to him for his constant encouragement.*

*I am greatly indebted to **Prof. Dr. Mohammed E.M. Zowail**, Professor of Cytogenetics, Zoology Department, Faculty of Science, Benha University, for suggesting the problem, planning, reading, revising the manuscript and significant encouragement and help. His insight, patience on the both professional and personal levels helped in the accomplishment of the present study.*

*I also wish to express my great thanks to **Dr. Magda El-Ezabi**, Assistant Professor of Zoology, Zoology Department, Faculty of Science, Benha University, for her valuable criticism, reading the manuscript and interest in this work.*

*My deep gratitude to **Dr. Kahlid M. Sharaf El-Deen**, Lecturer of Zoology, Zoology Department, Faculty of Science, Benha University, for his perfect help in the laboratory work, constructive criticism during reading and final revision of the manuscript for friendly guidance.*

Finally, I would like to express my thanks to every one who had participated some way or another in the conduction of this study.

LIST OF TABLES

No.	Table	Page
1	The concentrations of some heavy metals in the different localities far from any pollution sources, agricultural and industrial discharge.	53
2	The average values of iron from different localities.	54
3	The average values of lead from different localities.	54
4	The average values of cadmium from different localities.	58
5	The average values of zinc from different localities.	58
6	The average values of copper from different localities.	60
7	The average values of nickel from different localities.	60
8	The average values of mercury from different localities.	62
9	Recommended guidelines values of the examined metals in the water.	62
10	The mean values of centromeric attenuation in head kidney cells of <i>Tilapia zillii</i> in polluted water.	77
11	The mean values of chromatid break in head kidney cells of <i>Tilapia zillii</i> in polluted water.	79
12	The mean values of chromatid deletion in head kidney cells of <i>Tilapia zillii</i> in polluted water.	81
13	The mean values of end to end association in head kidney cells of <i>Tilapia zillii</i> in polluted water.	84
14	The mean values of chromatid gap in head kidney cells of <i>Tilapia zillii</i> in polluted water.	86

No.	Table	Page
15	The mean values of fragmentation in head kidney cells of <i>Tilapia zillii</i> in polluted water.	88
16	The mean values of ring in head kidney cells of <i>Tilapia zillii</i> in polluted water.	91
17	The mean values of stickiness in head kidney cells of <i>Tilapia zillii</i> in polluted water.	93
18	The mean values of monosomic in head kidney cells of <i>Tilapia zillii</i> in polluted water.	95
19	The mean values of polyploidy in head kidney cells of <i>Tilapia zillii</i> in polluted water.	99
20	Mitotic index in head kidney cells of <i>Tilapia zillii</i> in polluted water.	101
21	The mean values with one type of aberration in head kidney cells of <i>Tilapia zillii</i> in polluted water.	103
22	The mean values of more than one type of aberration in head kidney cells of <i>Tilapia zillii</i> in polluted water.	105
23	The mean values of total structural in head kidney cells of <i>Tilapia zillii</i> in polluted water.	107
24	The mean values of total numerical in head kidney cells of <i>Tilapia zillii</i> in polluted water.	109
25	Average of chromosomal abnormalities observed in head kidney cells of <i>Tilapia zillii</i> in polluted water.	111
26	The mean values of % DNA fragmentation in liver cells of <i>Tilapia zillii</i> in polluted water.	113
27	SDS-PAGE banding pattern of protein measured in liver of <i>Tilapia zillii</i> from the area of agricultural pollution.	117

No.	Table	Page
28	SDS-PAGE banding pattern of protein measured in liver of <i>Tilapia zillii</i> from the area of industrial pollution.	118
29	The frequency of appearance of liver proteinogram fractions in the control and agricultural polluted fishes at different distances.	128
30	The frequency of appearance of liver proteinogram fractions in the control and industrial polluted fishes at different distances.	130

LIST OF FIGURES

No.	Figure	Page
1	Map illustrate in the three different localities.	39
2	The average values of iron from the different localities.	55
3	The average values of lead from the different localities.	55
4	The average values of cadmium from the different localities.	59
5	The average values of zinc from the different localities.	59
6	The average values of copper from the different localities.	61
7	The average values of nickel from the different localities.	61
8	The average values of mercury from the different localities.	63
9	Normal metaphase spread in head kidney cells of <i>Tilapia zillii</i> .	65
10	Metaphase spread of head kidney cells showing centromeric attenuation.	66
11	Metaphase spread of head kidney cells showing chromatid break.	67
12	Metaphase spread of head kidney cells showing chromatid deletion.	68
13	Metaphase spread of head kidney cells showing chromatid gap.	69
14	Metaphase spread of head kidney cells showing fragmentation.	70

No.	Figure	Page
15	Metaphase spread of head kidney cells showing ring.	71
16	Metaphase spread of head kidney cells showing end to end association.	72
17	Metaphase spread of head kidney cells showing sticky.	73
18	Metaphase spread of head kidney cells showing monosomy.	74
19	Metaphase spread of head kidney cells showing polyploidy.	75
20	The mean values of centromeric attenuation in head of kidney cells of <i>Tilapia zillii</i> in polluted water.	78
21	The mean values of chromatid break in head kidney cells of <i>Tilapia zillii</i> in polluted water.	80
22	The mean values of chromatid deletion in head kidney cells of <i>Tilapia zillii</i> in polluted water.	82
23	The mean values of end to end association in head kidney cells of <i>Tilapia zillii</i> in polluted water.	85
24	The mean values of chromatid gap in head kidney cells of <i>Tilapia zillii</i> in polluted water.	87
25	The mean values of fragmentation in head kidney cells of <i>Tilapia zillii</i> in polluted water.	89
26	The mean values of ring in head kidney cells of <i>Tilapia zillii</i> in polluted water.	92
27	The mean values of stickiness in head kidney cells of <i>Tilapia zillii</i> in polluted water.	94
28	The mean values of monosomic in head kidney cells of <i>Tilapia zillii</i> in polluted water.	96

No.	Figure	Page
29	The mean values of polyploidy in head kidney cells of <i>Tilapia zillii</i> in polluted water.	100
30	Mitotic index in head kidney cells of <i>Tilapia zillii</i> in polluted water.	102
31	The mean values with one type of aberration in head kidney cells of <i>Tilapia zillii</i> in polluted water.	104
32	The mean values of more than one type of aberration in head kidney cells of <i>Tilapia zillii</i> in polluted water.	106
33	The mean values of total structural in head kidney cells of <i>Tilapia zillii</i> in polluted water.	108
34	The mean values of total numerical in head kidney cells of <i>Tilapia zillii</i> in polluted water.	110
35	The mean values of % DNA fragmentation in liver cells of <i>Tilapia zillii</i> in polluted water.	114
36	Liver proteinogram of the control group of <i>Tilapia zillii</i> .	119
37	Liver proteinogram of <i>Tilapia zillii</i> from zone (1) of agricultural polluted water.	120
38	Liver proteinogram of <i>Tilapia zillii</i> from zone (2) of agricultural polluted water.	121
39	Liver proteinogram of <i>Tilapia zillii</i> from zone (3) of agricultural polluted water.	122
40	Liver proteinogram of <i>Tilapia zillii</i> from zone (1) of industrial polluted water.	123
41	Liver proteinogram of <i>Tilapia zillii</i> from zone (2) of industrial polluted water.	124
42	Liver proteinogram of <i>Tilapia zillii</i> from zone (3) of industrial polluted water.	125
43	The frequency of appearance of liver proteinogram fractions in the control and agricultural polluted fishes at different distances.	129
44	The frequency of appearance of liver proteinogram fractions in the control and industrial polluted fishes at different distances.	131
