

CONTENTS

	Page
1- Introduction	1
2- Literature Review	4
3- Material and Methods	32
4- Results	52
4.1. Isolation of red pigment producer fungi	52
4.2. Screening of isolated fungi for red pigment production	52
4.3. Isolation and simple identification of red pigment produced by isolated <i>Monascus</i> sp.	55
4.4. Identification of isolated <i>Monascus</i> strain	55
4.5. Factors affecting red pigment production by <i>M. purpureus</i>	59
4.5.1. Effect of specific media	59
4.5.2. Effect of incubation period	62
4.5.3. Effect of incubation temperature	65
4.5.4. Effect of initial pH	68
4.5.5. Effect of agitation speed	71
4.5.6. Effect of carbon sources	74
4.5.7. Effect of starch concentration	77
4.5.8. Effect of nitrogen sources	80
4.5.9. Effect of ammonium sulfate concentrations	83
4.5.10. Effect of bio-elements	86
4.5.11. Effect of CaCO ₃ concentrations	89
4.5.12. Effect of inoculum type	92
4.5.13. Effect of inoculum age	95
4.5.14. Effect of inoculum density	98
4.5.15. Effect of working volume	101
4.6. Gamma irradiation study	104
4.6.1. Effect of gamma irradiation on the survival of <i>M. purpureus</i> .	104
4.6.2. Effect of gamma irradiation on the production of red pigment	107
4.7. Immobilization study	110
4.7.1. Red pigment production by sponge-immobilized cells of gamma irradiated <i>M. purpureus</i>	110
4.7.2. Effect of immobilized inoculum age	113
4.7.3. Effect of immobilized inoculum density	116
4.7.4. Time profile	119
4.7.5. Effect of repeated batch fermentation	122
4.8. Antimicrobial effects	126
4.9. Toxicological evaluation	126
Discussion	129
Summary	146
References	150
Arabic Summary	1
