# Management of large bowel tumours

**Abdu Hassan Baslony**

Management of large bowel tumours is a matter of importance due to increasing of these tumours and fatal course of most of these tumours if neglected. To deal good with these tumours we must understand the anatomy of large bowel and to diagnose these tumours we must know well the histology and physiology of that part. The pathology of large bowel tumours is essential to know the course of these tumours though I started this essay by anatomy histology physiology and pathology of large bowel. According to presentation of large bowel tumours their incidence and aetiology of this group and relation to malignancy the adenomas as asymptomatic and villous papilloma and familial polyposis as symptomatic tumours in malignant large bowel tumours the management is detailed with short note about the operative or post operative mortality and morbidity.
